Over the past decade, forensic psychology has grown rapidly as a subject, with an increasing number of forensic psychologists working in demanding roles in prisons, secure training facilities, and high, medium and low security healthcare facilities as well as other parts of the criminal justice system. This Dictionary is designed to meet the needs of both students and practitioners. It contains approximately 100 entries on key terms and concepts, arranged alphabetically and contributed by leading academic and practicing forensic psychologists.

Forensic Science: An Illustrated Dictionary is an expanded version of Brenner's Forensic Science Glossary (CRC Press. Boca Raton, Fl, 1999) This book is an effort by Brenner to keep pace with the ever-growing terminology of the disciplines that comprise the field of forensic science--a sizable task

considering the recent explosion of interest in the field. *Forensic Science: An Illustrated Dictionary* includes terms from both the emerging and also the more traditional, but certainly expanding, branches of forensic science. It addresses a plethora of areas including, but not limited to, DNA technology, biochemistry, trace evidence, drugs, toxicology, firearms identification, questioned documents, photography, computer forensics, crime scene strictly in the light of forensic science, which is appropriate for a field-specific reference. For example, discipline is defined as "a major area of casework for which a laboratory may seek accreditation".

In forensics, there is often a difficulty conveying critical scientific terms to investigators, attorneys, juries, and even court reporters. *Forensic Science Glossary* is a single source reference that contains the spelling and definitions of commonly used terms found in forensic environments. This glossary of words and their meanings covers important areas of forensic science, including the relevant toxicology, documents, drug chemistry, criminalistics, ballistics, and DNA analysis. It is the first forensic glossary to integrate such a wide variety of topics.

'A dictionary of research methodology and statistics in applied linguistics' is a reference guide which offers an authoritative and comprehensive overview of key terms and concepts in the areas of research and statistics as concerns the field of applied linguistics. The volume is intended as a resource to delineate the meaning and use of various concepts, approaches, methods, designs, techniques, tools, types, and processes of applied linguistics research in an efficient and accessible style. Some entries relating to statistical aspects of research are also used so as to help the researcher in the successful formulation, analysis, and execution of the research design and carry the same towards its logical end. This book makes use of approximately 2000 entries on the key concepts and issues of research with cross references where necessary. This volume is designed to appeal to undergraduate and graduate students, teachers, lecturers, practitioners, researchers, consultants, and consumers of information across the field of applied linguistics and other related disciplines.

Investigators, prosecutors, defense attorneys, professionals within the field of law enforcement, and other criminal justice personnel need to understand forensic terms when communicating with forensic scientists or interpreting forensic lab results. *Forensic Science—An Illustrated Dictionary* introduces commonly-used forensic terms, many of which are crucial to the interpretation and understanding of laboratory report findings. The field of forensics grew considerably since the publication of the previous version of this book, the *Forensic Science Glossary*. With the introduction of new procedures and methods of analysis, many new terms have emerged. This volume adds many of the new terms used in criminal court cases, forensic entomology, forensic psychiatry, crime scene reconstruction, and other forensic disciplines. The definitions and accompanying illustrations come from various domains including toxicology, drug chemistry, criminalistics, bioscience/DNA, firearms/ballistics, forensic pathology, and the legal system. The illustrations communicate the use of laboratory instruments, investigative techniques, and laboratory methods of analysis. These detailed definitions and illustrations are valuable references to students and nonscientific professionals including police investigators interpreting lab reports, court reporters, prosecutors and defense attorneys preparing for trial. About the Author John C. Brenner earned a B.S. in Health Care Administration from the University of Southern Illinois while serving full time in the U.S. Navy. Upon completion of his naval career he received an MS in Forensic Science from the University of New Haven. He is a member of the Northeastern Association of Forensic Scientists (NEAFS). Mr. Brenner has spent 20 years as a forensic scientist with the New York State Police, and is trained in toxicology, serology, and DNA analysis. While providing testimony for more than 160 criminal court cases including homicides, rapes, blood assaults, burglaries, and DWIs, the author developed the idea for the first book, *Forensic Science Glossary*. *Creating Forensic Science – An Illustrated Dictionary* is one way of giving something back to the forensic community for the knowledge and experience he has gained working in the field of forensics.

In the wake of the phenomenal success of crime shows like CSI, forensic science has never been so popular. The obsessive attention that Grissom and his crew afford seemingly insignificant details, such as particles of dirt in a bullet wound and the presence of pollen in tyre tracks, have left audiences eager to know more about this field of study. In this fully revised and updated edition, real-life examples come under the scalpel as forensic scientist Jay Siegel follows the course of evidence all the way from the crime scene to the court judgement. In *Forensic Science: A Beginner's Guide*, all major areas are covered, including drugs, trace evidence, pathology, entomology, odontology, anthropology, crime scene investigation and the law.
