I own 8 Precision Aerobatics planes (two are duplicates), and may be enticed to add the XR 61. There's no question in my mind, these are the highest quality, best flying electric airplanes available: light, strong where they need to be, and very forgiving. And, they don't need giant power packs to get the job done. Good job PA!

Primarily for pilots, the book also makes light reading for enthusiasts and spectators.

Seven exemplary antimotion sickness drugs and three 'individually treated' placebos were investigated in ten men during twenty-four aerobatic maneuvers in an A1E 'Skyraider' aircraft and in performance of the Pensacola Slow Rotation Room Dial Test. The rank order of drug effectiveness and of subject susceptibility under each condition was determined and compared. Individual difference in drug effectiveness was significant at the .01 level or better and was similar under the two conditions. Susceptibility to motion sickness in the SRR was generally a good predictor of susceptibility in aerobatics in eight subjects, but in the remaining two it was grossly in error. A combination of scopolamine and d-amphetamine was by far the most effective of the drugs tested under both conditions.

Sport, precision, and competitive aerobatics, and especially air show and demonstration flying are enjoying a rebirth of interest exceeding that of the 1930's. Improved aerobatic airplanes and power plants are in the hands of more civilian pilots than ever before. These aircraft enable the pilot to easily initiate maneuvers which exceed human tolerances, yet not overstress the aircraft. Military aircraft reached this point in World War II and the G-suit was perfected to protect the pilot. The military groups still use the G-suit but this equipment is impractical for most civil aerobatic activities. The paper provides information on (1) the nature of aerobatic G forces, (2) human physiology in relation to G forces, (3) human tolerances to various levels and times of exposure to G forces, and (4) means by which tolerance to G forces may be increased in terms of the general physical condition and the time during the maneuver when the G forces are imposed.
