Mammalogy is the study of mammals from the diverse biological viewpoints of structure, function, evolutionary history, behavior, ecology, classification, and economics. Newly revised and updated, the fifth edition of Mammalogy aims to explain and clarify the subject as a unified whole. In recent years we have witnessed significant changes in the taxonomy of mammals. The authors have kept pace with such changes in the field and have revised each chapter to reflect the most current data available. New pedagogical elements, including chapter outlines and further reading sections, help readers grasp key concepts and explore additional content on their own. Two new chapters on domestication and mammal diseases are available on the Mammalogy website.

It is subdivided into (A) Programmes, Strategies, Plans of Action and Blueprints; and (B) Declarations, Resolutions and Accord. The forthcoming Volume II will deal with key sectoral areas including nature conservation and biodiversity; water resources management; animal and human health; climate change and energy; transboundary pollution; and disaster management and emergency response. The book will be of interest to all ASEAN government officials, diplomats and its peoples; ASEAN dialogue partners; entities associated with ASEAN; comparative environmental lawyers and every ASEAN watcher."

It is a real pleasure to write the Foreword for this book, both because I have known and respected its author for many years and because I expect this book's publication will mark an important milestone in the continuing worldwide development of microsystems. By bringing together all aspects of microsystem design, it can be expected to facilitate the training of not only a new generation of engineers, but perhaps a whole new type of engineer — one capable of addressing the complex range of problems involved in reducing entire systems to the micro- and nano-domains. This book breaks down disciplinary barriers to set the stage for systems we do not even dream of today. Microsystems have a long history, dating back to the earliest days of mic- electronics. While integrated circuits developed in the early 1960s, a number of laboratories worked to use the same technology base to form integrated sensors. The idea was to reduce cost and perhaps put the sensors and circuits together on the same chip. By the late-60s, integrated MOS-photodiode arrays had been developed for visible imaging, and silicon etching was being used to create thin diaphragms that could convert pressure into an electrical signal. By 1970, selective anisotropic etching was being used for diaphragm formation, retaining a thick silicon rim to absorb package-induced stresses. Impurity- and electrochemically-based etch-stops soon emerged, and "bulk micromachining" came into its own.

The first edition of this innovative book brought a new perspective to the metabolic and therapeutic aspects of amino acids in clinical nutrition. Since its publication, a number of very important advances have been made in the field and interesting new findings have emerged. Until now, no reference has fully explored the promising new developments

The author of this book announces that the Popes and Bishops have not been obedient to the request of Mary the Mother of God for decades regarding Consecrating Russia to her Immaculate Heart. She promised the conversion of Russia and peace in the world if the above was to happen. Neither has happened. The world is full of unnatural activities such as 40 million abortions per year and same-sex marriages. It is for these reasons the Heavenly Father has called the author to be the twenty-first century Moses. He is to lead the world out of the slavery of sin. This book represents his plan and the rosary is his weapon. In this plan he will recruit twelve generals and millions of Jonahs attempting to lead all people out of slavery.
