Living Things and the Places Where They Live. Grade K - Interdependent Relationships in Ecosystems: Animals, Plants, and Their Environment. In this Storyline, students develop an understanding of what plants and animals, including people, need to survive and how they get what they need from the places where they live.

Science A-Z

A-Z Animals was founded on three guiding principles: accurate content you can trust, spreading knowledge on the animal kingdom, and giving back. Today, more than 30,000 species are threatened with extinction, and thousands would already be lost without tireless conservation efforts. Knowing that the first step toward conservation is spreading knowledge of the incredible animals species across our planet, A-Z Animals was founded in 2008 to offer an online encyclopedic resource across animals ...

Animal science courses This course involves studying animal biology, how animals function and how we interact with them and depend on them for food and leisure. You'll then learn how to apply this knowledge to issues relating to agriculture, livestock production, bio-ethics and sustainable food production.

Animal Science Courses & Undergraduate Degrees

We use common names for animals in everyday speech, but scientists have a different method of naming creatures, called "binomial nomenclature," or two-word naming. This scientific naming system avoids confusion when a scientist is speaking to a colleague who speaks another language—or when different animals are given the same name in various regions.

Animal Science BSc - University of Nottingham

Grasslands (also known as prairies and savanna) are areas where the vegetation is dominated by grasses and other herbaceous (non-woody) plants. Grasslands occur naturally on all continents except Antarctica and as flowering plants, grasses grow in great concentrations in climates where annual rainfall ranges between 500 and 900 mm. The grassland habitat is often greatly [...]
