Anthony Giddens Modernity And Self Giddens' Modernity and Self Identity – in 14 bullet points. A brief post covering the relationship between self and society in late-modernity according to Anthony Giddens, covering concepts such as Globalisation, abstract systems, ontological security, manufactured risks, narcissism and fundamentalism. This is very much my own reading of Giddens' text – Modernity and Self-Identity: Self and Society in the Late Modern Age.

Giddens selects ten features which are distinctive about the search for self-identity in the late modern age: The self is seen as a reflexive project for which the individual is responsible.

Self-understanding is relegated to the more inclusive and fundamental aim of rebuilding a more rewarding sense of identity.

Anthony Giddens - Wikipedia

Giddens is among those who have resisted the equations of modernity with liberalism, or modernity with capitalism. Giddens draws heavily from Marx and takes his own position in defining modernity. Modernity, according to him, is multi-dimensional. It is his emphasis, which distinguishes him from other sociologists.

This major study develops a new account of modernity and its relation to the self. Building upon the ideas set out in *The Consequences of Modernity*, Giddens argues that 'high' or 'late' modernity is a post traditional order characterised by a developed institutional reflexivity. In the current period, the globalising tendencies of modern institutions are accompanied by a transformation of day-to-day social life having profound implications for personal activities. The self becomes a 'reflexive project',

Sustained through a revisable narrative of self identity. The reflexive project of the self, the author seeks to show, is a form of control or mastery which parallels the overall orientation of modern institutions towards 'colonising the future'. Yet it also helps promote tendencies which place that orientation radically in question - and which provide the substance of a new political agenda for late modernity. In this book Giddens concerns himself with themes he has often been accused of unduly neglecting, including especially the psychology of self and self-identity. The volumes are a decisive step in the development of his thinking, and will be essential reading for students and professionals in the areas of social and political theory, sociology, human geography and social psychology.

In this major theoretical statement, the author offers a new and provocative interpretation of the institutional transformations associated with modernity. We do not as yet, he argues, live in a post-modern world. Rather the distinctive characteristics of our major social institutions in the closing period of the twentieth century express the emergence of a period of 'high modernity,' in which prior trends are radicalised rather than undermined. A post-modern social universe may eventually come into being, but this as yet lies 'on the other side' of the forms of social and cultural

Self-Identity which currently dominate world history. In developing an account of the nature of modernity, Giddens concentrates upon analyzing the intersections between trust and risk, and security and danger, in the modern world. Both the trust mechanisms associated with modernity and the distinctive 'risk profile' it produces, he argues, are distinctively different from those characteristic of pre-modern social orders. This book build upon the author's previous theoretical writings, and will be of fundamental interest to anyone concerned with Gidden's overall project. However, the work covers issues which the author has not previously analyzed and extends the scope of his work into areas of pressing practical concern. This book will be essential reading for second

Anthony Giddens is widely recognized as one of the most important sociologists of the post-war period. This is the first full-length work to examine Giddens' social theory. It guides the reader through Giddens' early attempt to overcome the duality of structure and agency. He saw this duality as a major failing of social theories of modernity. His attempt to resolve the problem can be regarded as the key to the development of his landmark 'structuration theory'. The book is the most complete and thorough assessment of Giddens' work currently available. It

incorporates insights from many different perspectives into his theory of structuration, his work on the formation of cultural identities and the fate of the nation-state. This far-reaching work also touches on issues such as the transformation of modern intimacy and sexuality, and the fate of politics in late modern society.

'Before the current global era it is impossible to imagine that comparable events [like September 11] could have occurred, reflecting as they do our new-found interdependence. The rise of global terrorism, like world-wide networks involving in money-laundering, drug-running and other forums of organised crime, are all parts of the dark side of globalisation.'

Reith lecture series on globalisation delivered in 1999 by Anthony Giddens. Now updated with a new chapter addressing the post-September 11th global landscape, this book remains the intellectual benchmark on how globalisation is reshaping our lives. The changes are explored in five main chapters: * Globalisation * Risk * Tradition * Family * Democracy.

In this major theoretical statement, the author offers a new and provocative interpretation of institutional transformations associated with modernity. What is modernity? The author suggests, "As a first approximation, let us simply say the following: 'modernity' refers to modes of social life or organization which emerged in Europe from about the seventeenth century onwards and

which subsequently became more or less worldwide in their influence.” We do not as yet, the author argues, live in a post-modern world. The distinctive characteristics of our major social institutions in the closing years of the twentieth century suggest that, rather than entering into a period of post-modernity, we are moving into a period of “high modernity” in which the consequences of modernity are becoming more radicalized and universalized than before. A post-modern social universe may eventually come into being, but this as yet lies on the other side of the forms of social and cultural organization that currently dominate world history. In developing a fresh characterization of the nature of modernity, the author concentrates on the themes of security versus danger and o trust versus risk .

Modernity is a double-edged phenomenon. The development of modern social institutions has created vastly greater opportunities for human beings to enjoy a secure and rewarding existence than in any type of pre-modern system. But modernity also has a somber side that has become very important in the present century, such as the frequently degrading nature of modern industrial work, the growth of totalitarianism, the threat of environmental destruction, and the alarming development of military power and weaponry. The book builds upon the author's previous theoretical writings and will be of great interest to those who have followed his work through the years. However, this book covers issues the author has not previously analyzed and extends the scope of his work into areas of
