The model is still deformed, but it now shows the variation in Von Mises stress patterns over the entire part. The color scale provides the range of the stress values that are present within the model for the given conditions.

CAD / CAM services design and optimize the piston of an engine using CAD software such as CATIA. Another software is used for analysis purposes. During the design and analysis phase, the volume of the piston, the thickness of the barrel, and width of other ring lands of the piston are increased while Vonmisses stress and Deflection are increased after optimization. Despite this, all parameters are well within design consideration.

– A process-centric CAD/CAM software solution marketed exclusively by IBM and developed by Dassault Systems – At dtdi d ft IA system used to design and manufacture many complex 3D products. Today, 7 out of every 10 airplanes and 4 out of every 10 cars are designed using CATIA-CADAM Solutions, making it the de facto standard for these markets.

Modern CAD/CAE/CAM Tools and Their Applications

CATIA is a parametric modeling software that combines product lifecycle management (PLM), CAM, computer-aided engineering (CAE), and CAD. It achieves each of these functions through some distinct features.

CATIA is good to be used in surface modelling cars, aero-
planes, high end products, etc. ANSYS is a Mechanical

software which gives control over Finite Element Analysis (FEA) thus, this software is commonly used in structural analysis, dynamic,linear and non linear studies.
