\"La frontera...I heard it for the first time back in the late 1940s when Papa and Mama told me and Roberto, my older brother, that someday we would take a long trip north, cross la frontera, enter California, and leave our poverty behind.\" So begins this honest and powerful account of a family's journey to the fields of California -- to a life of constant moving, from strawberry fields to cotton fields, from tent cities to one-room shacks, from picking grapes to topping carrots and thinning lettuce. Seen through the eyes of a boy who longs for an education and the right to call one palce home, this is a story of survival, faith, and hope. It is a journey that will open readers' hearts and minds.

Having come from Mexico to California ten years ago, fourteen-year-old Francisco is still working in the fields but fighting to improve his life and complete his education.

Traces the author's education at Columbia University, where he struggled with cultural differences and a changing sense of identity.

\" This sequel to Breaking Through and The Circuit again brings to the forefront the daily trials of poor immigrant families . . . compelling and honest. \" —School Library Journal From the perspective of the young adult he was then, Francisco Jim é nez describes the challenges he faced in his efforts to continue his education. During his college years, the very family solidarity that allowed Francisco to survive as a child is tested. Not only must he leave his family behind when he goes to Santa Clara University, but while Francisco is there, his father abandons the family and returns to Mexico. This is the story of how Francisco coped with poverty, with his guilt over leaving his family financially strapped, with his self-doubt about succeeding academically, and with separation. Once again his telling is honest, true, and inspiring A Smithsonian Magazine Best Book of the Year \" Rooted in the past, Jim é nez ' s story is also about the continuing struggle to make it in America, not only for immigrant kids but also for those in poor families. Never melodramatic or self-important, the spare episodes will draw readers with the quiet daily detail of work, anger, sorrow, and hope. \" —Booklist (starred review) \" In this eloquent, transfixing account, Jim é nez again achieves a masterful addition to the literature of the memoir. \" —Smithsonian Magazine \" No one who reads these life stories will forget them. Jim é nez reaches out to let us walk in his shoes, feel his pain and pride, joy and sorrow, regrets and hope. \" —Sacramento Bee

Synthetic biology -- unlike any research discipline that precedes it -- has the potential to bypass the less predictable process of evolution to usher in a new and dynamic way of working with living systems. Ultimately, synthetic biologists hope to design and build engineered biological systems with capabilities that do not exist in natural systems -- capabilities that may ultimately be used for applications in manufacturing, food production, and global health. Importantly, synthetic biology represents an area of science and engineering that raises technical, ethical, regulatory, security, biosafety, intellectual property, and other issues that will be resolved differently in different parts of the world. As a better understanding of the global synthetic biology landscape could lead to tremendous benefits, six academies -- the United Kingdom's Royal Society and Royal Academy of Engineering, the United States' National Academy of Sciences and National Academy of Engineering, and the Chinese Academy of Science and Chinese Academy of Engineering -- organized a series of international symposia on the scientific, technical, and policy issues associated with synthetic biology. Positioning Synthetic Biology to Meet the Challenges of the 21st Century summarizes the symposia proceedings.
