In his newest book, *Civilizing the Economy*, Marvin Brown challenges the framework of a free-market economy and offers an alternative vision for the place and purpose of economic interactions. The economy, Brown argues, should be based on providing for the needs and wants of humans, and we should recognize the role of the providers themselves.

The factors that contributed to racism can be varied: from economic reasons to finding and controlling an underclass of slave labourers. 13 From this, it follows that the ultimate goal of imperialism in using racism as a reason to intervene is not about racial domination per se, but geopolitical security or commercial profit. 14 Hence, the purpose of racist states is ethnic survival as they ...

When a handful of people thrive while whole industries implode and millions suffer, it is clear that something is wrong with our economy. The wealth of the few is disconnected from the misery of the many. In *Civilizing the Economy*, Marvin Brown traces the origin of this economics of dissociation to early capitalism, showing how this is illustrated in Adam Smith's denial of the central role of slavery in wealth creation. In place of the Smithian economics of property, Brown proposes that we turn to the original meaning of economics as household management. He presents a new framework for the global economy that reframes its purpose as the making of provisions instead of the accumulation of property. This bold new vision establishes the civic sphere as the platform for organizing an inclusive economy and as a way to move toward a more just and sustainable world.

The liberal state is dead, long live the partner state Across the world, the liberal nation state is on its knees. Rising inequality, deep political polarization, and the pervasive power of corporations are tearing apart the social contract and threatening to crush democracy. *Civilizing the State* traces the history and development of the liberal state and its changing role from the enabler of capitalism to protector of citizen welfare, to its hollowing out and capture by corporate and elite interests rendering it unfit to address the compounding crises of inequality, injustice, ecological collapse, and loss of legitimacy. Author John Restakis explores citizen-powered alternatives and experiments in co-operation, deep democracy, solidarity economics, and commoning from Spain, India, the global peasant movement, and the emerging stateless democracy of Rojava rising from the wreckage of the Syrian civil war. The final section views the current crisis as an opportunity to reimagine the state not as handmaid to predatory elites but as a partner state that promotes equity, economic democracy, co-operation, and human thriving, driven by deep democracy and a fully sovereign civil society. Incisive, penetrating, and inspirational, this is essential reading for all engaged citizens with a stake in co-creating a better future for all.

From the bestselling author of *The Ascent of Money* and *The Square and the Tower* "A dazzling history of Western ideas." —*The Economist* "Mr. Ferguson tells his story with characteristic verve and an eye for the felicitous phrase." —*Wall Street Journal* "[W]ritten with vitality and verve . . . a tour de force." —*Boston Globe* Western civilization's rise to global dominance is the single most important historical phenomenon of the past five centuries. How did the West overtake its Eastern rivals? And has the zenith of Western power now passed? Acclaimed historian Niall Ferguson argues that beginning in the fifteenth century, the West developed six powerful new concepts, or "killer applications"—competition, science, the rule of law, modern medicine, consumerism, and the work ethic—that the Rest lacked, allowing it to surge past all other competitors. Yet now, Ferguson shows how the Rest have downloaded the killer apps the West once monopolized, while the West has literally lost faith in itself. Chronicling the rise and fall of empires alongside clashes (and fusions) of civilizations, *Civilization: The West and the Rest* recasts world history with force and wit. Boldly argued and teeming with memorable characters, this is Ferguson at his very best.

Global Standards of Market Civilization brings together leading scholars, representing a range of political views, to investigate how global 'standards of market civilization' have emerged, their justification, and their political, economic and social impact. Key chapters show how as the modern state system has evolved such standards have also developed, incorporating the capacity for social cooperation and self-government to which states must conform in order to fully participate as legitimate members in international society. This study analyzes their justification, and their political, economic and social impact. Civilization is a term widely used within modern political discourse its meaning, yet it is poorly understood and misused. part I explores the idea of a 'standard of civilization', its implications for governance, and the use of such standards in political theory and economic thought, as well as its historical application part II presents original case studies that demonstrate the emergence of such standards and explore the diffusion of liberal capitalist ideas through the global political economy and the consequences for development and governance; the International Monetary Fund's capacity to formulate a global standard of civilization in its reform programs; and problems in the development of the global trade, including the issue of intellectual property rights. This book will be of strong interest to students and scholars in wide range of fields relating to the study of globalization including: international political economy; international political theory; international relations theory; comparative political economy; international law; historical sociology; and economic history.

Economic globalisation and universal human rights both have the aspiration and power to improve and enrich individuals and communities. However, their respective institutions, methods, practices and goals differ, leading to both detrimental clashes and beneficial synergies. In this book, David Kinley analyses how human rights intersect with the trade, aid and commercial dimensions of global economic relations, taking the view that, while the global economy is a vitally important civilising instrument, it itself requires civilising according to human rights standards. Combining meticulous research with highly informed views and experiences, he outlines the intellectual, policy and practical frameworks for ensuring that the global economy advances the ends of human rights, argues for better exploitation of the global economy's capacity to distribute as well as create wealth, and proposes mechanisms by which to minimise and manage the socially debilitating effects of its market failures and financial meltdowns.

After a promising start as a prosperous and liberal democratic nation at the end of the nineteenth century, Argentina descended into instability and crisis. This stark reversal, in a country rich in natural resources and seemingly bursting with progress a

This open access book helps readers combine history, politics, and ethics to address the most pressing problem facing the world today: environmental survival. In *A Climate of Justice*, Marvin Brown connects the environmental crisis to basic questions of economic, social, and racial justice. Brown shows how our current social climate maintains systemic injustices, and he uncovers resources for change through a civic ethics of repair and reciprocity. A must-read for researchers and educators in the area of environmental ethics and those teaching courses in the fields of public policy and environmental sustainability. With the support of more than 30 libraries, the LYRASIS United Nations Sustainable Development Goals Fund has enabled this publication related to SDG13 (Climate Action) to be available fully open access.
