Color Codes: Modern Theories of Color in Philosophy . . .

Opponent Process Theory. This color theory was proposed by Ewald Hering. The Opponent Process Theory states that there are color receptors present in the visual system that respond to the three pairs of colors in an opposite manner, thus the name of the theory. These 3 color pairs include black-white, blue-yellow, and red-green.

Vision: Color Theories - Explorable.com
At that time, color theory was based on RYB primary colors, which defined red, yellow,

Online Library Color Codes Modern Theories Of Color In Philosophy Painting

and blue as the colors capable of mixing all hues. This is the scheme most commonly taught in grade school and is still used in mixing paints. Later scholars would switch to an RGB (red, green, blue) and CMY (cyan, magenta, yellow) models as advances in technology increased the range of synthetic pigments in photography and printing.

The psychological, additive and subtractive
primaries of modern colour theory. In line
with Hering's widely accepted opponent model,
modern colour theory recognizes four
psychological primaries, the three historical
primaries plus green, arranged in two
opposing pairs, yellow/blue and red/green
(Fig. 11.2.3A).

The Dimensions of Colour, modern colour
theory

Color training in the arts today is deeply divided between modern and "traditional" color theory. Modern color theory characteristically emphasizes concepts of color space, especially the framework of hue, value and chroma devised by the artist and art teacher Albert Munsell. Additionally, modern color theory incorporates the discoveries by which Helmholtz, Maxwell and Hering revolutionized our fundamental understanding of the nature of color as radically as Darwin transformed our ...
