The thoroughly revised & updated 9th Edition of Go To Objective NEET Physics is developed on the objective pattern following the chapter plan as per the NCERT books of class 11 and 12. The book has been rebranded as GO TO keeping the spirit with which this edition has been designed. • The complete book has contains 28 Chapters. • In the new structure the book is completely revamped with every chapter divided into 2-4 Topics. Each Topic contains Study Notes along with a DPP (Daily Practice Problem) of 15-20 MCQs. • This is followed by a Revision Concept Map at the end of each chapter. • The theory also includes Illustrations & Problem Solving Tips. • The theory is followed by a set of 2 Exercises for practice. The first exercise is based on Concepts & Application. It also covers NCERT based questions. • This is followed by Exemplar & past 8 year NEET (2013 - 2021) questions. • In the end of the chapter a CPP (Chapter Practice Problem Sheet) of 45 Quality MCQs is provided. • The solutions to all the questions have been provided immediately at the end of each chapter.

This book is a research monograph in the field of topology, which will become a standard reference.

A small conference was held in September 1986 to discuss new applications of elliptic functions and modular forms in algebraic topology, which had led to the introduction of elliptic genera and elliptic cohomology. The resulting papers range, from these topics through to quantum field theory, with considerable attention to formal groups, homology and cohomology theories, and circle actions on spin manifolds. Ed. Witten's rich article on the index of the Dirac operator in loop space presents a mathematical treatment of his interpretation of elliptic genera in terms of quantum field theory. A short introductory article gives an account of the growth of this area prior to the conference.

This book contains selected questions related to C++14 with detailed solutions to all of these which will help the reader to hone her skills to solve a particular problem. Primary sources of this collection are: Advanced C++ FAQs: Volume 1: Fundamentals Advanced C++ FAQs: Volume 2: Generic Programming Advanced C++ FAQs: Volumes 1 & 2 This book is not an introduction to C++. It assumes that the reader is aware of the basics of C++98 and C++03 and wants to expand her horizon to latest and greatest in C++14 (aka C++1y). The problems are marked on a scale of one (\*) (simplest) to five stars (\*\*\*\*\*) (hardest). Forthcoming volumes will strengthen this particular approach spanning various areas of C++: variable templates constexpr static data members of class templates constexpr function templates ... static data member template specialization of variable template default argument and specialization of variable template lambda and variable template variable templates variables vary auto variable templates valid specialization but error? variable templates and lambda revisited Incremental improvement to integral constant is same musings auto variable template and generic lambda constexpr member functions and implicit const .... constexpr vs static vs uninitialized constexpr vs member function revisited deprecated attribute Member initializers and aggregate class ...
