The popular microcontrollers like AVR, 8051, PIC, ARM etc well expose an engineer to software development aspect of embedded systems. But there is another approach of embedded development as well – Hardware based Embedded Design. Unfortunately, microcontrollers lack capability to expose an engineer to this aspect of embedded development.

FPGA Vs Microcontrollers – Another Approach to Embedded Design

Embedded design. A microcontroller can be considered a self-contained system with a processor, memory and peripherals and can be used as an embedded system. The majority of microcontrollers in use today are embedded in other machinery, such as automobiles, telephones, appliances, and peripherals for computer systems.
