4 Serie di funzioni: esercizi svolti Quindi la serie converge puntualmente in R alla funzione S.Essendo fn continua su R, anche Sn è continua su R, mentre S non ve continua in 0. Quindi la successione (Sn) non converge uniformemente a S in Re di conseguenza la serie data nonconverge uniformemente e normalmente in R. Infine consideriamo la convergenza assoluta.

Bearing in mind the large relative significance of problems involved in the removal of heat from the nuclear reactors and its conversion into other types of energy, the basic information on thermodynamics and heat transfer are treated. (Author).
The purpose of the volume is to provide a support for a first course in Mathematics. The contents are organised to appeal especially to Engineering, Physics and Computer Science students, all areas in which mathematical tools play a crucial role. Basic notions and methods of differential and integral calculus for functions of one real variable are presented in a manner that elicits critical reading and prompts a hands-on approach to concrete applications. The layout has a specifically-designed modular nature, allowing the instructor to make flexible didactical choices when planning an introductory lecture course. The book may in fact be employed at three levels of depth. At the elementary level the student is supposed to grasp the very essential ideas and familiarise with the corresponding key techniques. Proofs to the main results befitt the intermediate level, together with several remarks and complementary notes enhancing the treatise. The last, and farthest-reaching, level requires the additional study of the material contained in the appendices, which enable the strongly motivated reader to explore further into the subject. Definitions and properties are furnished with substantial examples to stimulate the learning process. Over 350 solved exercises complete the text, at least half of which guide the reader to the solution. This new edition features additional material with the aim of matching the widest range of educational choices for a first course of Mathematics.
The ENUMATH conferences were established in 1995 in order to provide a forum for discussion on recent topics of numerical mathematics. They seek to bring together leading experts and young scientists, with special emphasis on contributions from Europe.In the second ENUMATH conference in 1997, recent results and new trends in the analysis of numerical algorithms as well as their application to challenging scientific and industrial problems were discussed. Apart from theoretical aspects, a major part of the conference was devoted to numerical methods in interdisciplinary applications.The topics covered in this proceedings include: higher order finite element methods, non-matching grids, least-squares methods for partial differential equations, multiscale analysis, boundary element method, optimization in partial differential equations, solid mechanics, microstructures, computational fluid dynamics, computational electrodynamics and semiconductors.

A darkly humorous exploration of the human body and its various functions in poetic prose, Valerio Magrelli' s The Condominium of the Flesh, a personal chronicle of his clinical experience, catalogues a life history of ailments without ever being pathological.
This " brilliant collection of essays " and travelogues by the celebrated author of Invisible Cities " may change the way you see the world around you " (The Guardian, UK). Italo Calvino ' s boundless curiosity and ingenious imagination are displayed in peak form in Collection of Sand, his last collection of new works published during his lifetime. Delving into the delights of the visual world—both in art and travel—the subjects of these 38 essays range from cuneiform and antique maps to Mexican temples and Japanese gardens. In Calvino ' s words, this collection is " a diary of travels, of course, but also of feelings, states of mind, moods...The fascination of a collection lies just as much in what it reveals as in what it conceals of the secret urge that led to its creation " (from Collection of Sand). Never before translated into English, Collection of Sand is an incisive and often surprising meditation on observation and knowledge. " beautifully translated by Martin McLaughlin " (The Guardian, UK).

What if there were no constraints on the use of photographs and graphics; if books could show objects dynamically to illustrate their multi-dimensional characteristics; and if new and revised material could be added at frequent intervals in response to direct feedback from users? Welcome to ThermoNet! Combining a concise text and Web component, ThermoNet not only covers standard thermodynamics topics but also enhances learning through interactive animations, tutorials, exercises, and problems. An integrated learning package that brings thermodynamics to life: Developed by engineering educators with partial support from the National Science Foundation. Incorporates a Web-based resource where words are used to support visual representations. Utilizes graphics-rich environments to help readers gain a strong conceptual understanding of the material. Includes an interactive presentation of governing equations that clearly shows the physics underlying each term. Focuses the reader' s attention on the fundamental principles and motivates them to master the concepts.

Because the Internet has changed and is changing the ways in which we think and act, it must also be changing the ways in which we think Christianity and its theology. Cybertheology is the first book to explore this process from a Catholic point of view. Drawing on the theoretical work of authors such as Marshall McLuhan, Peter Levy, and Teilhard de Chardin, it questions how technologies redefine not only the ways in which we do things but also our being and therefore the way we perceive reality, the world, others, and God. " Does the digital revolution affect faith in any sense? " Spadaro asks. His answer is an emphatic Yes. But how, then, are we to live well in the age of the Internet? Spadaro delves deeply into various dimensions of the impact of the Net on the Church and its organization, on our understanding of revelation, grace, liturgy, the sacraments, and other classical theological themes. He rightly points out that the digital environment is not merely an external instrument that facilitates human communication or a purely virtual world, but part of the daily experience of many people, a new " anthropological space " that is reshaping the way we think, know, and express ourselves. Naturally, this calls for a new understanding of faith so that it makes sense to people who live and work in the digital media environment. In developing the notion of cybertheology, Spadaro seeks to propose an intelligence of faith (intellectus fidei) in the era of the Internet. The book ' s chapters include reflections on man the decoder and the search engines of God, networked existence and the mystical body, hacker ethics and Christian vision, sacraments and " virtual presence, " and the theological challenges of collective intelligence.

This book is a collection of illustrated papers by British architects Jonathan Sergison and Stephen Bates written between 2002 and 2007. Writing, like drawing and talking together, supports their collaborative and creative work, providing as it does a tangible reference point for communication and in the search for shared objectives. Although each of the papers included in this volume was written by one of the architects, they acknowledge shared authorship of their content and objective. In the preparation of each paper, the observer acts as a friendly critic to the write, integral to the process and supportive of the exploration of personal and shared experience. Some of theses papers were written as a result of self-imposed discipline, others were prepared as lectures, to support their teaching practice, to highlight a particular theme or encourage a way of looking at something. Others were written as contributions towards symposia, conferences and publications, or in response to invitations to speak publicly about their work. In some cases, a lecture based on notes and images has been subsequently developed for publication. This results in a rich mix in terms of conet, lenght, structure and character. The twenty papers are organised thematically and chronologically within each section, addressing reflections on their own position within architectural discourse, on the process of making buildings, on some of the ideas that recur in their work and on aspects of place.
