The 10th Congress of the European Federation of National Associations of Orthopaedics and Traumatology (EFORT) is the most important combined congress of the national societies in Europe. At present a total of 36 societies are members of this organisation. The major goal of EFORT is to bring current knowledge of diseases and trauma of the musculoskeletal system to all European surgeons and additionally to welcome colleagues from all over the world to join us in sharing our daily work experience. In the scientific programme the instructional lectures form a very basic and important part of the Congress. In Vienna a total of 25 sessions are included in the programme. The authors come from all over Europe and they discuss topics from many different fields of trauma and orthopaedics. These lectures not only give the opportunity for us to be informed about various diseases, but they are also influenced by the authors' experience based on the treatment philosophy in their own country – again an opportunity to widen the European horizon. They are aimed at both the general orthopaedic surgeons and the young residents and trainees who want to widen their knowledge in different topics of orthopaedic and trauma surgery. As the chairman of the Local Organising Committee I thank all the authors for

Technique Systems in Chiropractic describes and analyses the most common techniques in today's chiropractic. These techniques, sometimes called brand-name or proprietary techniques, each provide a step-by-step protocol for proceeding from examination findings to adjustive and other treatment procedures. Until now, the most readily available descriptions of these techniques have taken the form of articles and seminar advertisements written and distributed by the technique innovators themselves. Major chiropractic technique textbooks frequently list these techniques and some provide synopses, but they do not include the detail really required for readers to come to any serious conclusions about their safety and efficacy. In Technique Systems in Chiropractic, the authors describe over two dozen technique systems in a non-judgmental but critical manner, summarizing the available research and drawing conclusions as to what is actually known about them, compared with what the technique innovators themselves say. **KEY FEATURES** - Describes and analyses over two dozen of the most widely known and used chiropractic technique systems, in' alphabetical order. - Uses a common format for each technique system, allowing the reader to easily locate desired

information and draws comparisons between techniques. - Features chapters on chiropractic terminology, as well as examination and adjustive methods that are common to many technique systems. - Compiles and summarizes the relevant research on each technique, drawing summary conclusions and clearly identifying what is known and what is not known about each. - Explains why there have been so many technique systems in chiropractic, past and present, as this relates to issues of jurisprudence, practice parameters, and guidelines for care. - Explores the interface between chiropractic technique systems and the movement toward evidence-based chiropractic (EBC). Presents demographic information on the rates of utilization of each technique in Canada and the United States. - Includes a glossary of technique-specific terms and jargon. *Technique Systems in Chiropractic* provides a comprehensive, state-of-the-art resource on the different technique systems in common use by chiropractors throughout the world. It will provide students and practitioners of chiropractic with the easy access they need to enrich their knowledge of the vast array of chiropractic technique procedures, whether to whet their interest in pursuing further training in given technique systems, or to incorporate various of these procedures into the more generic, eclectic practice or chiropractic to which many practitioners seem to be drawn at this time. Insurance claims adjusters, attorneys, managed health care and government administrators, students and instructors in allied health professions, individual! interested in complementary and alternative medicine (CAM), and, of course, current and prospective chiropractic patients will also find this book of great interest.

of the surgery. *Clinical Orthopaedic Rehabilitation*, 4th Edition, helps today's orthopaedic teams apply the most effective, evidence-based protocols for maximizing return to function following common sports injuries and post-surgical conditions. Charles Giangarra, MD and Robert Manske, PT continue the commitment to excellence established by Dr. S. Treatment and rehabilitation protocols are presented in a step-by-step, algorithmic format with each new phase begun after criteria are met (criteria-based progression, reflecting current best practice). Expert Consult eBook version included with purchase. This enhanced eBook experience allows you to search all of the text, figures, videos, and references from the book on a variety of devices.
