A practical, highly accessible guide for novice researchers conducting qualitative research in public relations and marketing communications, this book guides the reader through all aspects of the research process.

PreambleIn the book "Quantitative and Qualitative Research Methods Simplified" I attempt to acquaint the beginning researcher with the available options in the field. I sought to present the information in a simple way so as to demystify Research methods which are thought to be complex by most beginner researchers. The basic aim of this book is to provide a simple flexible readership of technical issues in research in glossary format one at a time. Therefore subtopics are explained in their own stead to be picked and understood as and when necessary. The book is written principally for university students at masters, undergraduate, diploma and tertiary college level that haven't had prior encounter with structured research. It is hoped that they will find invaluable information for use in writing term papers, thesis, dissertations and academic reports. It is also a good read for anyone eager to know what research is all about as a leisure reader manual. I have included a sample thesis for reference. The thesis was a student requirement for the award of a diploma in real estate management. Though not the best, and not being at the highest educational level of academia, the thesis is meant to illustrate at the lowest level and in the simplest layout possible, the steps a beginner ought to take to construct the best research project possible at the lowest end of learning. Building on this knowledge, I hope the reader will have acquired the basic understanding to inquire deeper into the field if necessary. Samuel M Maina PhD

planning, carrying out one's projects, and making sense of the results. Contributors: Ruth Belling, Michelle Butler, Catherine Comiskey, Siobhan Corrigan, Gloria Crispino, Orla Dempsey, Suzanne Guerin, Maree Johnson, Carmel Kelly, Elaine Lehane, Maria Lohan, Susan McLaren, Deirdre Mongan, Corina Naughton, Rhona O'Connell, Elaine Pierce, Gary Rolfe, Eileen Savage, Anne Scott, Emma Stokes, Roger Watson " " Learning quantitative research is taken much for granted. This is probably why there are fewer generic books on quantitative than qualitative research. This book is long overdue. Clearly-written and well structured, it takes us through the whole journey of a research project from developing 'research questions' to 'presenting the findings', passing through philosophical underpinnings, recruitment of participants and ethical considerations. Written by an array of well-known researchers and teachers, this book will certainly appeal to new as well as seasoned researchers. Those who will use it, will not be disappointed." Kader Parahoo, University of Ulster "The title of this text is somewhat misleading. It is not only an excellent and thorough guide to qualitative health research methods; it is also an excellent introduction to all forms of qualitative research. It takes the reader gently through theoretical and ethical concerns to the practicalities and benefits of utilising qualitative approaches. As such it is that rare thing; a text that can be used by novice researchers to learn their craft, and a key reference resource for experienced research practitioners." Dr. John Cullen, School of Business, National University of Ireland, Maynooth, UK "This is a first-rate collection of essays that promotes an informed understanding of both underpinning principles and widely used techniques. A great deal of effort has clearly been invested in co-ordinating the contributions, and this has delivered clarity, complementarity and effective coverage. This is a welcome, carefully-crafted and very accessible resource that will appeal to students and researchers in healthcare and beyond." Martin Beirne, Professor of Management and Organizational Behaviour, University of Glasgow, Adam Smith Business School, UK
