Mendeleev discovered the periodic table (or Periodic System, as he called it) while attempting to organise the elements in February of 1869. He did so by writing the properties of the elements on pieces of card and arranging and rearranging them until he realised that, by putting them in order of increasing atomic weight, certain types of element regularly occurred.

periodic table in 1869, Alexandre-Emile Béguyer de Chancourtois organized the elements by atomic weight five years earlier. While Mendeleev and Chancourtois arranged elements by atomic weight, the modern periodic table is ordered according to increasing atomic number (a concept unknown in the 19th century.)

AU is the periodic table abbreviation for gold. AU est l'abréviation de l'or sur le tableau périodique. Now, every element in the periodic table has a specific number of protons and neutrons.

~~periodic table~~ ~~Translation into French~~ ~~examples ...~~

The periodic table is an arrangement of the chemical elements, organized on the basis of their atomic numbers, electron configurations and recurring chemical properties. Elements are presented in order of increasing atomic number. The standard form of the table consists of a grid with rows called periods and columns called groups.
