GHQ - General Health Questionnaire

In the GHQ-12 group, 90 and in the GHQ-28 group, 80 subjects filled in the questionnaires and agreed to participate in the second stage of the study--a psychiatric interview. The criterion validity of the GHQs was a mental health diagnosis, based on the Munich version of Composite International Diagnostic Interview.

The validity of general health questionnaires, GHQ-12 and ...

General Health Questionnaire (GHQ) Developed in the 1970s, the General Health Questionnaire is a method to quantify the risk of developing psychiatric disorders. This instrument targets two areas – the inability to carry out normal functions and the appearance of distress – to assess well-being in a person. The format of the full GHQ is 60-item test with a four-point scale for each response.

General Health Questionnaire (GHQ) - Statistics Solutions

The 12-item General Health Questionnaire (GHQ-12) has been widely used in many settings and languages, and includes posi- tively and negatively worded items. Our aim was to test the hypothesis that the GHQ-12 assesses both positive and negative mental health and that these domains are independent of one another.
