Geometric and Engineering Drawing: Morling, Ken ... Geometric Dimensioning and Tolerancing is a system for defining and communicating engineering tolerances. It uses a symbolic language on engineering drawings and computer-generated three-dimensional solid models that explicitly describe nominal geometry and its allowable variation. It tells the manufacturing staff and machines what degree of accuracy and precision is needed on each controlled feature of the part. GD&T is used to define the nominal geometry of parts and assemblies, to define the

Inscribe a regular polygon of any number of sides (say $n = 5$), in a circle. Draw the circle with diameter AB. Divide AB in to “n” equal parts Number them. With center A & B and radius AB, draw arcs to intersect at P. Draw line P2 and produce it to meet the circle at C. AC is the length of the side of the polygon.
