Alastair McKenzie's GST — A Practical Guide is widely considered to be the authoritative New Zealand text on goods and services tax. In addition to covering the broad framework and operation of GST in New Zealand, the book provides in-depth coverage of special problem areas and contentious issues regarding the application of the Goods and Services Tax Act 1985. The ninth edition has been comprehensively updated to incorporate the new legislative regimes for input tax, apportionment of input tax, adjustments and the zero-rating of land transactions which came into force in 2011. It also encompasses other legislative developments, case law and IRD rulings and statements that have been released since the publication of the eighth edition in 2008.

This report considers the biological and behavioral mechanisms that may underlie the pathogenicity of tobacco smoke. Many Surgeon General's reports have considered research findings on mechanisms in assessing the biological plausibility of associations observed in epidemiologic studies. Mechanisms of disease are important because they may provide plausibility, which is one of the guideline criteria for assessing evidence on causation. This report specifically reviews the evidence on the potential mechanisms by which smoking causes diseases and considers whether a mechanism is likely to be operative in the production of human disease by tobacco smoke. This evidence is relevant to understanding how smoking causes disease, to identifying those who may be particularly susceptible, and to assessing the potential risks of tobacco products.

Nutrition in the Prevention and Treatment of Disease, Second Edition, focuses on the clinical applications and disease prevention of nutrition. This revised edition offers 18 completely new chapters and 50% overall material updated. Foundation chapters on nutrition research methodology and application clearly link the contributions of basic science to applied nutrition research and, in turn, to research-based patient care guidelines. Readers will learn to integrate basic principles and concepts across disciplines and areas of research and practice as well as how to apply this knowledge in new creative ways. Chapters on specific nutrients and health cover topics where data are just beginning to be identified, such as choline, antioxidants, nutrition and cognition, and eye disease. Established areas of chronic disease: obesity, diabetes, cardiovascular disease, gastrointestinal disease, and bone health are presented each in their own sections, which aim to demonstrate the inter-action of basic science, genetics, applied nutrition research, and research-based patient care guidelines. Given its unique focus and extensive coverage of clinical applications and disease prevention, this edition is organized for easy integration into advanced upper-division or graduate nutrition curriculums. Busy researchers and clinicians can use this book as a "refresher course" and should feel confident in making patient care recommendations based on solid current research findings. \* 18 completely new chapters and 50% overall new material \* Unique focus and extensive coverage of clinical applications and disease prevention. \* Clearly links the contributions of basic science to applied nutrition research and, in turn, to research-based patient care guidelines. \* Assimilates a large body of research and applications and serves as a "refresher course for busy researchers and clinicians.
