Interest in recombinant antibody technologies has rapidly increased because of its wide range of possible applications in therapy, diagnosis, and especially, cancer treatment. The possibility of generating human antibodies that are not accessible by conventional polyclonal or monoclonal approaches has facilitated the development of antibody engineering technologies. This manual presents a comprehensive collection of detailed step-by-step protocols, provided by experts. The text covers all basic methods needed in antibody engineering as well as recently developed and emerging technologies.

Progress in Basic and Clinical Immunology is a result of the 14th European Immunology Meeting - EFIS 2000, held in Poznan, Poland, on 23-27 September 2000. EFIS 2000 gathered over 1400 immunologists from all over the world. It was an exceptionally memorable meeting for a number of reasons: 1) it was held in the last year of the century and the millennium, thus provoking conclusions of past achievements of immunology and projections for the future; 2) it was held in Poland, a country that is a symbol of struggle for freedom for a large number of scientists originating from the "Eastern Bloc" countries, and 3) EFIS celebrated its 25th anniversary at this occasion. This comprehensive volume contains 62 chapters grouped into 11 sections: T-cells, Immune Receptors, Antigen Presentation/Dendritic Cells, Cytokines, Immunodeficiencies, Autoimmunity, Allergy/Inflammation, Immunotherapy, Vaccines, Tumor Immunology, and Cancer Immunotherapy.

This book presents a comprehensive overview on origin, structure, properties, modification strategies and applications of the biopolymer lignin. It is organized into four themed parts. The first part focuses on the analysis and characterization of the second most abundant biopolymer. The following part is devoted to the biological aspects of lignin such as biosynthesis and degradation. In the third part, chemical modification strategies and the preparation of composites as well as nano- and microparticles are discussed.The final part addresses the industrial application of lignin and its derivatives, as well as lignin materials. The usage for synthesis of biofuels, fine chemicals and in agriculture and food industry is covered. This book is a comprehensive source for researchers, scientists and engineers working in the field of biopolymers as well as renewable materials and sources.

The development of a comprehensive vaccine against *Neisseria meningitidis*, the causative agent of meningococcal disease, has remained elusive because of bacterial diversity and immunologic evasion. In *Meningococcal Vaccines: Methods and Protocols*, Andrew Pollard and Martin Maiden have assembled an impressive collection of the latest molecular and cellular techniques for the development, evaluation, and implementation of vaccines to be used against this dreaded disease. The contributors-leading scientists, clinicians, and public health physicians describe in detail the many approaches to vaccine design, as well as the assessment of immune response to vaccine candidates and novel vaccine formulations. They also present as a test case the recent implementation of a new meningococcal vaccine in the United Kingdom. A companion volume, *Meningococcal Disease: Methods and Protocols*, contains detailed methods for diagnostic microbiology, bacterial characterization, epidemiology, host-pathogen interactions, and clinical studies. Timely and comprehensive, *Meningococcal Vaccines: Methods and Protocols* provides the scientist, public health physician, epidemiologist, clinical microbiologist, and clinician with the essential tools to lay bare the secrets of the meningococcus and to develop, evaluate, and implement successful new meningococcal vaccines.

Discover everything you've ever wanted to know about marijuana all in one place with this authoritative A-to-Z guide to cannabis! What's a wake and bake? Who is Mitch Hedberg? What does Louisa May Alcott have to do with cannabis? And what exactly is the difference between a bong and a bubbler? Now you can "weed" all about it and find all the answers and more with this entertaining and updated edition of Weedopedia, your guide to everything marijuana—from the best movies to watch while high to cannabis slang and terminology. Whether you're interested in learning more about all things marijuana, or if you want something entertaining to read while enjoying a toke, this book is the one-stop-shop for all your weed-related needs.

There should be, and in the best of cases there is, a synergy between basic research and patient care. However, this synergy is hard to develop because the techniques required to be a successful researcher are so different from the skills required to be an outstanding physician. Harold R. Roberts, M.D., of the University of North Carolina at Chapel Hill, is an example of a physician-researcher who has benefited from having his feet in both the world of patient care and the world of the laboratory: he has let clinical problems direct his basic research effort and conversely has adopted research advances in his care of patients. Dr. Roberts's long and continuing career has included many research and clinical advances. He was part of the first group to determine the amino acid sequence of the important thrombin inhibitor hirudin and part of the group that prepared the first cryoprecipitates which were the first alternative to plasma as therapy in hemophilia A. Dr. Roberts has made significant advances in understanding the protein chemistry behind hemophilia B, he was among the first researchers to identify some patients as not being completely deficient but instead as having measurable levels of protein and subsequently demonstrated that this protein was dysfunctional. This important advance led him to a classification scheme for patients into Cross Reacting Material (CRM) positive, negative, and reduced. Dr.
