IndieBound. Powells. A leading anthropology researcher on human evolution proposes a new and controversial theory of how our species came to be. In this groundbreaking and engaging work of science, world-renowned paleoanthropologist Chris Stringer sets out a new theory of humanity's origin, challenging both the multiregionalists (who hold that modern humans developed from ancient ancestors in different parts of the world) and his own "out of Africa" theory, which maintains that humans ...

Lone Survivors | Chris Stringer | Macmillan  
Chris Stringer's Lone Survivors: How We Came to Be the Only Humans on Earth comes along some seventeen years after his ground-breaking book African Exodus: The Origins of Modern Humanity (Henry Holt, 1996). Stringer is one of the principal architects and proponents of the "Out-of-Africa" (OOA) hypothesis associated with the origin and dispersal of anatomically modern humans, i.e., Homo sapiens.

Lone Survivors : Chris Stringer : 9781250023308  
British paleoanthropologist Stringer (Homo Britannicus, 2006, etc.) points out that most scientists agree that our first hominid ancestors appeared in Africa 5 million years ago; many species evolved, and a few wandered north about 2 million years ago. Where Homo sapiens originated and how it came out on top remains a matter of intense debate, but Stringer marshals the latest evidence and concludes that his own opinion is correct: Modern humans appeared in a small area of Africa about ...

LONE SURVIVORS by Chris Stringer | Kirkus Reviews  
Stringer still thinks that this is broadly correct, but the situation is more complicated than at one time appeared, and he now prefers 'Recently Out of Africa', to reflect this. Earlier species, such as Homo erectus and the ancestors of the Neanderthals, left Africa long before modern humans had even evolved, and to make matters still more complicated, some of them may have migrated back to ...

A leading researcher on human evolution proposes a new and controversial theory of how our species came to be In this groundbreaking and engaging work of science, world-renowned paleoanthropologist Chris Stringer sets out a new theory of humanity's origin, challenging both the multiregionalists (who hold that modern humans developed from ancient ancestors in different parts of the world) and his own "out of Africa" theory, which maintains that humans emerged rapidly in one small part of Africa and then spread to replace all other humans within and outside the continent. Stringer's new theory, based on archeological and genetic evidence, holds that distinct humans coexisted and competed across the African continent—exchanging genes, tools, and behavioral strategies. Stringer draws on analyses of old and new fossils from around the world, DNA studies of Neanderthals (using the full genome map) and other species, and recent archeological digs to unveil his new theory. He shows how the most sensational recent fossil findings fit with his model, and he questions previous concepts (including his own) of modernity and how it evolved. Lone Survivors will be the definitive account of who and what we were, and will change perceptions about our origins and about what it means to be human.

The truth lies ahead for Chris and the remaining survivors. Rebuilding the water plant won' t be an easy task, especially when they discover just how much worse things are. To mitigate panic, Chris must keep a secret, but time is not on his side. As he works to rebuild, new challenges are thrown his way. Someone will betray him. With the odds stacked against him and the walls closing in, he is forced to make a decision that could determine the fate of all who survived. Will he make the right decision, or will uncertainty and mistrust cause more harm than good? Can we logically combine recent research on human origins with ancient legends of floods, paradise lost, and cloud clad gods destroying civilizations? Yes, says author Alan Daniel, who has thoughtfully joined key primordial legends with mitochondrial DNA research, archeological and anthropological finds, and geological evidence in Tracking Ancient Legends. DNA evidence shows a small band of humans crossed out of Africa into Eurasia about 100,000 BC; however, why is lost to the primordial mists. But the why may be answered by primeval legends overlooked until now. The author theorizes that prehistoric legends may explain the flight from Africa. The model set forth is fascinating, as well as epic in scope. Competing theories are examined, including the ancient astronaut concepts, and the foundations of theory itself. Are aliens from other worlds the source of our legends, or is something much more earthly and surprising the groundwork of our legendary past?

The impacts of global warming are of concern to all of us. The potential responses of birds to climate change have come increasingly to the fore, and are of particular interest to the ornithological community. Are birds sensitive to climate change and how will they react to a world of global warming? These are the key issues to be explored in this book, with particular reference to Western Palearctic birds. Climate changes that have affected the region in the last two million years will be explored, drawing on published data on fossil birds. A major part of the book will be devoted to the distribution of Western Palearctic birds in relation to bioclimate. The final section of the book looks at migration and the relationship of the Western Palearctic to Africa.

From the first seconds Following the Big Bang, to our best guesses for the fate of the universe and humanity, science provides stunning new perspectives about the place of humanity in the cosmos. Humans may live on one planet in one small corner of the Milky Way, itself one of billions of other galaxies, but Earth may be unique in one respect. Earth is teeming with life, one species of which, through chance and natural selection, developed an extraordinary brain, gifted with imagination, curiosity and a compulsion to understand ourselves and the universe. Perspectives is a journey through deep time, from the creation of the universe to the beginnings of life, our human origins and later the rise of culture and religion. It explores what it means to be human, and where our technology could take us in the years and centuries to come...

INTERNATIONAL BEST SELLER • A gripping tour de force in which three estranged brothers return to the Swedish lakeside cottage where, more than two decades before, an unspeakable accident forever altered their family and changed the course of their lives. "Takes you deep into an emotional labyrinth [where] you'll cry for these brothers. For the men they became, for the boys they were, for the innocence they lost. Brilliant, haunting and unforgettable." —Fredrik Backman, author of A Man Called Ove There is Nils, the oldest, who couldn't escape his suffocating home soon enough, and Pierre, the youngest, easily bullied and quick to lash out. And then there is Benjamin, always the family's nerve center, perpetually on the lookout for triggers and trap doors in a volatile home where the children were left to fend for themselves, competing for their father's favor and their mother's elusive love. But as the years have unfolded, Benjamin has grown increasingly unthehered from reality, frozen in place while life carries on around him. And among the brothers a dangerous current now vibrates. What really happened that summer day when everything was blown to pieces? In a thrillingly fast-paced narrative, The Survivors mixes the emotional acuity of Edward St. Aubyn, the literary verve of Ian McEwan, and the heart of Shuggie Bain. By brilliantly dissecting a mind unravelling in the wake of tragedy, Alex Schulman reveals the ways in which our deepest loyalties leave us open to the greatest betrayals.

In Seoul Survivors, praised for its "impeccable plotting" by The Guardian, global warming has wreaked havoc on the planet. There is only one safe place to be: in the mountains above Seoul, glamorous Korean-American bioengineer Dr. Kim Da Mi is convinced she has found the perfect solution to save the human race. But her methods are strange and her business partner, Johnny Sandman, is a, unsavory character with many secrets. When impetuous aspiring model Sydney flies to Seoul at the behest of her boyfriend, Johnny Sandman, and meets Dr. Kim Da Mi, she doesn't know that the scientist is engaged in a secret power struggle with Johnny that will threaten her own life. Seduced by the visionary scientist, Sydney begins helping Kim Da Mi create a new breed of human beings to staff a revolutionary theme park: VirtuWorld. As the Winter Solstice looms, the Internet is rife with rumors that a devastating meteor called Lucifer's Hammer is heading straight toward Earth. VirtuWorld would be a haven from eco-apocalypse, but its success demands a sacrifice—just whose blood will spill is far from certain until the final pages of this tense cyber-thriller.

A Choice Outstanding Academic Book A Library Journal Best Sci-Tech Book A New York Times Notable Book Once in a generation a book such as African Exodus emerges to transform the way we see ourselves. This landmark book, which argues that our genes betray the secret of a single racial stock shared by all of modern humanity, has set off one of the most bitter debates in contemporary science. "We emerged out of Africa," the authors cont, "less than 100,000 years ago and replaced all other human populations." Employing persuasive fossil and genetic evidence (the proof is in the blood, not just the bones) and an exceptionally readable style, Stringer and McKie challenge long-held beliefs that suggest we evolved separately as different races with genetic roots reaching back two million years.

"From young activists at the forefront of the movement to end sexual assault on college campuses, a collection of survivor stories that will connect with students and inform and inspire us all Across the U.S. student activists are exposing a pervasive cover-up of sexual assault on college campuses. Every day more survivors come forward. But other survivors choose not to. We Believe You elevates the stories the headlines about this issue have been missing—more than 30 experiences of trauma, healing and everyday activism, representing a diversity of races, economic and family backgrounds, gender identities, immigration statuses, interests, capacities and loves. More than 1 in 5 women and 5 percent of men are sexually assaulted at college, a shocking status quo that might have stayed largely hidden and unaddressed but for the two authors of We Believe You. In 2013, Annie E. Clark and Andrea L. Pino, then 23 and 20, building on the work of earlier activists, outed themselves as assault survivors and filed a federal complaint against the University of North Carolina (Chapel Hill) for mishandling such crimes; within a month, the U.S. government began to investigate UNC. Within a year, dozens of colleges were under federal investigation. But Clark and Pino rightly see themselves as two among many. Students from every kind of college and university—large and small, public and private, highly selective and less so—are sounding alarms and staking claims to justice by filing complaints, by pressing charges, and by simply living beyond the effects of assault and the betrayals of their schools. A sampling of their voices speak out in this book"--

This volume offers a collection of ten case studies from clinical social workers who work in the field of sexual trauma, with the objective of challenging and informing social work practice with survivors and perpetrators of sexual trauma. These steps are meant to help the process of treatment by breaking down the experience of trauma to a set of steps and interventions aimed at resolving traumatic symptoms within a given time frame. Our text seeks to challenge the tendency towards reductionism inherent in the dominant social paradigm by encouraging the development of a phenomenological and interdisciplinary approach to understanding sexual trauma. In doing so, the examples of interventions presented in each case study reflect practice methods that honor the complexity of the human experience of sexual trauma, suffering, and recovery.
