Innovation and Scaling for Impact forces us to reassess how social sector organizations create value. Drawing on a decade of research, Christian Seelos and Johanna Mair transcend widely held misconceptions, getting to the core of what a sound impact strategy entails in the nonprofit world. They reveal an overlooked nexus between investments that might not pan out (innovation) and expansion based on existing strengths (scaling). In the process, it becomes clear that managing this tension is a difficult balancing act that fundamentally defines an organization and its impact. The authors examine innovation pathologies that can derail organizations by thwarting their efforts to juggle these imperatives. Then, through four rich case studies, they detail innovation archetypes that effectively sidestep these pathologies and blend innovation with scaling. Readers will come away with conceptual models to drive progress in the social sector and tools for defining the future of their organizations.

A beautiful and engaging guide to global warming ' s impacts around the world “ The direction in which our planet is headed isn't a good one, and most of us don ' t know how to change it. The bad news is that we will experience great loss. The good news is that we already have what we need to build a better future. ” —from the introduction Our planet is in peril. Seas are rising, oceans are acidifying, ice is melting, coasts are flooding, species are dying, and communities are faltering. Despite these dire circumstances, most of us don ' t have a clear sense of how the interconnected crises in our ocean are affecting the climate system, food webs, coastal cities, and biodiversity, and which solutions can help us co-create a better future. Through a rich combination of place-based storytelling, clear explanations of climate science and policy, and beautifully rendered maps that use a unique ink-on-dried-seaweed technique, *The Atlas of Disappearing Places* depicts twenty locations across the globe, from Shanghai and Antarctica to Houston and the Cook Islands. The authors describe four climate change impacts—changing chemistry, warming waters, strengthening storms, and rising seas—using the metaphor of the ocean as a body to draw parallels between natural systems and human systems. Each chapter paints a portrait of an existential threat in a particular place, detailing what will be lost if we do not take bold action now. Weaving together contemporary stories and speculative “ future histories ” for each place, this work considers both the serious consequences if we continue to pursue business as usual, and what we can do—from government policies to grassroots activism—to write a different, more
