The significantly expanded and updated new edition of a widely used text on reinforcement learning, one of the most active research areas in artificial intelligence. Reinforcement learning, one of the most active research areas in artificial intelligence, is a computational approach to learning whereby an agent tries to maximize the total amount of reward it receives while interacting with a complex, uncertain environment. In Reinforcement Learning, Richard Sutton and Andrew Barto provide a clear and simple account of the field's key ideas and algorithms. This second edition has been significantly expanded and updated, presenting new topics and updating coverage of other topics. Like the first edition, this second edition focuses on core online learning algorithms, with the more mathematical material set off in shaded boxes. Part I covers as much of reinforcement learning as possible without going beyond the tabular case for which exact solutions can be found. Many algorithms presented in this part are new to the second edition, including UCB, Expected Sarsa, and Double Learning. Part II extends these ideas to function approximation, with new sections on such topics as artificial neural networks and the Fourier basis, and offers expanded treatment of off-policy learning and policy-gradient methods. Part III has new chapters on reinforcement learning's relationships to psychology and neuroscience, as well as an updated case-studies chapter including AlphaGo and AlphaGo Zero, Atari game playing, and IBM Watson's wagering strategy. The final chapter discusses the future societal impacts of reinforcement learning.

Without cause and effect, there would be no science or technology, no moral responsibility, and no system of law. "Reproductive Justice is a first-of-its-kind primer providing a comprehensive yet succinct description of the field. Written by two legendary scholar-activists, Reproductive Justice introduces students to an intersectional analysis of race, class, and gender politics. Clearly showing how reproductive justice is a political movement of reproductive rights and social justice, the authors illuminate how, for example, a low-income, physically -disabled woman, living in West Texas with no viable public transportation, no healthcare clinic, and no living-wage employment opportunities, faces a complex web of structural obstacles as she contemplates her sexual and reproductive intentions. Putting the lives and lived experience of women of color at the center of the book, and using a human rights analysis, the authors show how reproductive justice is significantly different from the pro-choice/anti-abortion debates that have long-dominated the headlines and mainstream political conflict. In a period in which women's reproductive lives are imperiled, Reproductive Justice provides an essential guide to understanding and mobilizing around women's rights in the 21st century. Reproductive Justice: A New Vision for the 21st Century Series publishes works that explore the contours and content of reproductive justice. The series will include primers intended for students and those new to reproductive justice as well as books of original research to continue to further knowledge and impact society."--Provided by publisher.

By the early twentieth century, it became common to describe the United States as a "business civilization." President Coolidge in 1925 said, "The chief business of the American people is business." More recently, historian Sven Beckert characterized Henry Ford's massive manufactory as the embodiment of America: "While Athens had its Parthenon and Rome its Colosseum, the United States had its River Rouge Factory in Detroit..." How did business come to assume such power and cultural centrality in America? This volume explores the variety of business enterprise in the United States and analyzes its presence in the country's economy, its evolution over time, and its meaning in society. It introduces readers to formative business leaders (including Elbert Gary, Harlow Curtice, and Mary Kay Ash), leading firms (Mellon Bank, National Cash Register, Xerox), and fiction about business people (The Octopus, Babbitt, The Man in the Grey Flannel Suit). It also discusses Alfred Chandler, Joseph Schumpeter, Mira Wilkins, and others who made significant contributions to understanding of America's business history. This VSI pursues its three central themes - the evolution, scale, and culture of American business - in a chronological framework stretching from the American Revolution to today. The first theme is evolution: How has U.S. business evolved over time? How have American companies competed with one another and with foreign firms? Why have ideas about strategy and management changed? Why did business people in the mid-twentieth century celebrate an "organizational" culture promising long-term employment in the same company, while a few decades later entrepreneurship was prized? Second is scale: Why did business assume such enormous scale in the United States? Was the rise of gigantic corporations due to the industriousness of its population, or natural resources, or government policies? And third, culture: What are the characteristics of a "business civilization"? How have opinions on the meaning of business changed? In the late nineteenth century, Andrew Carnegie believed that America's numerous enterprises represented an exuberant "triumph of democracy." After World War II, however, sociologist William H. Whyte saw business culture as stultifying, and historian Richard Hofstadter wrote, "Once great men created fortunes; today a great system creates fortunate men." How did changes in the nature of business affect popular views? Walter A. Friedman provides the long view of these important developments.

Very roughly speaking, representation theory studies symmetry in linear spaces. It is a beautiful mathematical subject which has many applications, ranging from number theory and combinatorics to geometry, probability theory, quantum mechanics, and quantum field theory. The goal of this book is to give a "holistic" introduction to representation theory, presenting it as a unified subject which studies representations of associative algebras and treating the representation theories of groups, Lie algebras, and quivers as special cases. this approach, the book covers a number of standard topics in the representation theories of these structures. Theoretical material in the book is supplemented by many problems and exercises which touch upon a lot of additional topics; the more difficult exercises are provided with hints. The book is designed as a textbook for advanced undergraduate and beginning graduate students. It should be accessible to students with a strong background in linear algebra and a basic knowledge of abstract algebra.

Class-tested and coherent, this textbook teaches classical and web information retrieval, including web search and the related areas of text classification and text clustering from basic concepts. It gives an up-to-date treatment of all aspects of the design and implementation of systems for gathering, indexing, and searching documents; methods for evaluating systems; and an introduction to the use of machine learning methods on text collections. All the important ideas are explained using examples and figures, making it perfect for introductory courses in information retrieval for advanced undergraduates and graduate students in computer science. Based on feedback from extensive classroom experience, the book has been carefully structured in order to make teaching more natural and effective. Slides and additional exercises (with solutions for lecturers) are also available through the book's supporting website to help course instructors prepare their lectures.
