DART-MS is a relatively new, but very fast evolving technology. Due to its versatility, it addresses fields of crucial importance to people and community, e.g. food or agricultural, forensic, industrial, environmental, medicinal and clinical analysis.

This introductory textbook is based on the premise that the foundation of good science is good data. The educational challenge addressed by this introductory textbook is how to present a sampling of the wide range of mathematical tools available for laboratory research to well-motivated students with a mathematical background limited to an introductory course in calculus.

Finally, a couple of pens that you'll actually care about losing. These vintage-inspired floaty pens by Brass Monkey feature words that move and change as you interact with them. They're perfect for showing your co-workers just how talented you are at putting off even the smallest of tasks. Procrastinator? Ha! Try Mastercrastinator. Watch out world, you're raising a bar...just not THE bar, per se. - Includes two unique vintage-inspired floaty pens. - Pen 1: Procrastinator (which changes to Mastercrastinator when in use) - Pen 2: Professional (which changes to Adequatefessional when in use) - Each pen measures 6 long and .5 in diameter. - Writes in black ink, via ballpoint tips.

Existing and Potential Standoff Explosives Detection Techniques examines the scientific techniques currently used as the basis for explosives detection and determines whether other techniques might provide promising research avenues with possible pathways to new detection protocols. This report describe the characteristics of explosives, bombs, and their components that are or might be used to provide a signature for exploitation in detection technology; considers scientific techniques for exploiting these characteristics to detect explosives and explosive devices; discusses the potential for integrating such techniques into detection systems that would have sufficient sensitivity without an unacceptable false-positive rate; and proposes areas for research that might be expected to yield significant advances in practical explosives and bomb detection technology in the near, mid, and long term.

Molecular imprinting is a rapidly growing field with wide-ranging applications, especially in the area of sensor development, where the process leads to improved sensitivity, reliability, stability, and reproducibility in sensing materials. *Molecularly Imprinted Sensors in Analytical Chemistry* addresses the most recent advances and challenges relating to molecularly imprinted polymer sensors, and is the only book to compile this information in a single source. From fundamentals to applications, this material will be valuable to researchers working in sensing technologies for pharmaceutical separation and chemical analysis, environmental monitoring and protection, defense and security, and healthcare. Provides a systematic introduction to the different types of MIP-based sensors and reviews the basic principles behind each type of sensor. Includes state-of-the-art methodology supported by comparisons and discussions from leading experts in the field. Covers all types of sensing modes (optical, electrochemical, thermal, acoustic, etc.), materials and platforms. Appeals to a multidisciplinary audience of scientists and graduate students in a wide variety of fields, including chemistry, biology, biomedical science and engineering, and materials science and engineering.
