Abstract: The physiologic effects of the chromogranin A peptide fragment, pancreastatin, were studied in six healthy Caucasian men, ages 25-46 years. Synthetic pancreastatin (human chromogranin A 273-301 amide) was infused into the brachial artery of each subject to achieve a local concentration of 200 nM over 15 minutes. Forearm blood flow was measured by strain-gauge ...

The volume is designed to provide an integrated overview of the results from the last fifteen years of research on Chromogranins in relation to cell biology, physiology and biomedicine. The different chapters highlight novel activities of these proteins, including their role in granule biogenesis, hormone co-storage, stimulus-processing-secretion coupling, autonomic sympathetic/parasympathetic balance, immune and cardiocirculatory function, and the response to stress. Biomedical aspects are also illustrated with focus on the prognostic and diagnostic significance of Chromogranin in the presence of

tumors, cardiovascular diseases and inflammatory conditions.
