Metrology is the science of measurement  
Dimensional metrology is that branch of Metrology which deals with measurement of dimensions of a part or workpiece (lengths, angles, etc.)  
Dimensional measurements at the required level of accuracy are the essential link between the designer's intent and a delivered product.

establishes a common understanding of units, crucial in linking human activities. Modern metrology has its roots in the French Revolution's political motivation to standardise units in France, when a length standard taken from a natural source was proposed. This led to the creation of the decimal-based metric system in 1795, establishing a set of standards for other types of measurements. Several other countries adopted the metric system betwe

## Engineering Metrology And Measurements

?Measurement encompasses different fields such as communications, energy, medical sciences, food sciences, environment, trade, transportation, and military applications.

?Metrology concerns itself with the study of measurements.

?Measurement is an act of assigning an accurate and precise value to a physical variable.

?The physical variable then gets transformed into a measured variable.
