Introduction to Microsoft
Database Relationships
Access 2016 A database is a collection of information that is related. Access allows you to manage your information in one database file. Within Access there are four major objects: Tables, Queries, Forms and Reports.

Big databases are hard to wade through when you want to find something. Access provides several tools for sorting, searching, and creating your own specialized tools (known as queries) for finding the elusive single record or group of records you need. Access saves time by making it easy to import and recycle data.
