We state that midlatitude, synoptic-scale motions are at least approximately geostrophic, or quasi-geostrophic. The total wind can be decomposed into its geostrophic and ageostrophic components: $v = v_g + v_{ag}$ (2) We state that the ageostrophic wind v_{ag} is much smaller than the geostrophic wind v_g , such that: $O(\frac{v_{ag}}{v_g}) \ll 1$

Designed for use with the companion textbook, Midlatitude Synoptic Meteorology, this CD-rom takes just such an educational approach, reinforcing lessons on synoptic-dynamic meteorology, synoptically-driven mesoscale phenomena, numerical weather prediction, ensemble prediction, and more. The PowerPoint slides and additional resources on the CD will help form the basis of lectures and classroom work.

Synoptic Meteorology II: Quasi-Geostrophic Frontal Dynamics. 24-26 March 2015. Readings:Section 6.3 of Midlatitude Synoptic Meteorology. Introduction. When we examined frontogenesis and frontolysis, we examined frontal kinematics; e.g., the influence of the wind field upon the temperature field. To large extent, this explains much (~75%) of the frontal development process.
