Detective Sergeant Mariko Oshiro has been promoted to Japan's elite Narcotics unit—and with this promotion comes a new partner, a new case, and new danger. The underboss of a powerful yakuza crime syndicate has put a price on her head, and he'll lift the bounty only if she retrieves an ancient iron demon mask that was stolen from him in a daring raid. However, Mariko has no idea of the tumultuous past carried within the mask—or of its deadly link with the famed Inazuma blade she wields. The secret of this mask originated hundreds of years before Mariko was born, and over time the mask's power

has evolved to bend its owner toward destruction, stopping at nothing to obtain Inazuma steel. Mariko's fallen sensei knew much of the mask's hypnotic power and of its mysterious link to a murderous cult. Now Mariko must use his notes to find the mask before the cult can bring Tokyo to its knees—and before the underboss decides her time is up....

In *How to Super Tune and Modify Holley Carburetors*, best selling author Vizard explains the science, the function, and most importantly, the tuning expertise required to get your Holley carburetor to perform its best for your performance application.

Constitution.”—Thomas Jefferson The United States Constitution—the bedrock of our country, the foundation of our federal republic—is . . . dead. You won’t hear that from the politicians who endlessly pay lip service to the Constitution. It’s the dirty little secret that bestselling authors Thomas E. Woods Jr. and Kevin R. C. Gutzman expose in this provocative new book. The fact is that government officials—Democrats and Republicans, presidents, judges, and congresses alike—long ago rejected the idea that the Constitution possesses a fixed meaning limiting the U.S. government’s power. In case you’ve forgotten, this idea was not a minor aspect of the Constitution; it was the document’s very purpose. Woods and Gutzman round up the suspects responsible for the death of the

government the Founding Fathers designed. Going right to the scenes of the crimes, they dissect twelve of the most egregious assaults on the Constitution—some virtually unknown. In chronicling this “dirty dozen,” the authors show that the attacks began long before presidents declared preemptive wars, congresses built pork-barrel bridges to nowhere, and Supreme Court justices began to behave as our supreme legislators. In *Who Killed the Constitution?* Woods and Gutzman • REVEAL the federal government’s “great gold robbery”—the flagrant assault on the Constitution you never heard about in history class • DESTROY the phony case for presidential war power • EXPOSE how the federal government has actively discriminated to end . . . discrimination • TEAR DOWN the

“wall of separation” between church and state—an invention that completely contradicts what the Constitution says

- DARE to touch the “third rail of American jurisprudence,” *Brown v. Board of Education*—showing why a government decision that seems “right” isn’t necessarily constitutional

Never shying away from controversy, Woods and Gutzman reveal an unsettling but unavoidable truth: now that the federal government has broken free of the Constitution’s chains, government officials are restrained by little more than their sense of what they can get away with. *Who Killed the Constitution?* is a rallying cry for Americans outraged by government run amok and a warning to take heed before we lose the liberties we are truly entitled to.

The rigorous treatment of combustion can be so complex that the kinetic variables, fluid turbulence factors, luminosity, and other factors cannot be defined well enough to find realistic solutions. Simplifying the processes, The Coen & Hamworthy Combustion Handbook provides practical guidance to help you make informed choices about fuels, burners, and associated combustion equipment—and to clearly understand the impacts of the many variables. Editors Stephen B. Londerville and Charles E. Baukal, Jr, top combustion experts from John Zink Hamworthy Combustion and the Coen Company, supply a thorough, state-of-the-art overview of boiler burners that

covers Coen, Hamworthy, and Todd brand boiler burners. A Refresher in Fundamentals and State-of-the-Art Solutions for Combustion System Problems Roughly divided into two parts, the book first reviews combustion engineering fundamentals. It then uses a building-block approach to present specific computations and applications in industrial and utility combustion systems, including those for Transport and introduction of fuel and air to a system Safe monitoring of the combustion system Control of flows and operational parameters Design of a burner/combustion chamber to achieve performance levels for emissions and heat transfer Avoidance of excessive noise and vibration and the extension of equipment life under adverse conditions Coverage includes units,

fluids, chemistry, and heat transfer, as well as atomization, computational fluid dynamics (CFD), noise, auxiliary support equipment, and the combustion of gaseous, liquid, and solid fuels. Significant attention is also given to the formation, reduction, and prediction of emissions from combustion systems. Each chapter builds from the simple to the more complex and contains a wealth of practical examples and full-color photographs and illustrations. Practical Computations and Applications for Industrial and Utility Combustion Systems A ready reference and refresher, this unique handbook is designed for anyone involved in combustion equipment selection, sizing, and emissions control. It will help you make calculations and decisions on design features, fuel
