this text concludes that if the hierarchical pattern of classification is a real phenomenon, then the taxonomic statements of biology are unique.

This essay collection explores the concept of human nature and how it influences human perceptions of nature or the environment. Historians and other writers have tended to assume that all humans share specific basic responses to the natural environment. Over time, interpretations of human nature have ranged from rigid biological determinism to subtle and fluid evolutionary ecology. The

authors open interpretive doors into how biology, sociobiology, gender, race, culture, society, and other variables shape human discourse on nature and the environment. These essays were first delivered at the New Mexico Environmental Symposium held at the University of New Mexico in April 1996. In addition to the volume editors, contributors are Dan Flores, Virginia Scharff, Vera Norwood, Max Oelschlaeger, William deBuys, and Paul Hirt. Carolyn Merchant and Timothy Moy have penned respectively the foreword and afterword.

“Bold and provocative... Regenesiis tells of recent advances that may soon yield endless supplies of renewable energy, increased longevity and the return of long-extinct species.”—New Scientist In Regenesiis, Harvard biologist George Church and science writer Ed Regis explore the possibilities—and perils—of the emerging field of synthetic biology. Synthetic biology, in which living organisms are selectively altered by modifying substantial portions of their genomes, allows for the creation of entirely new species of
