Evolution in Action

We have just

celebrated the

“Darwin Year” with

the double

anniversary of his

200th birthday and

150th year of his

masterpiece, “On the

Origin of Species by

means of Natural

Selection”. In this

work, Darwin

established the
factual evidence of
biological evolution,
that species change
over time, and that
new organisms arise
by the splitting of
ancestral forms into
two or more
descendant species.
However, above all,
Darwin provided the
mechanisms by
arguing convincingly

that it is by natural selection – as well as by sexual selection (as he later added) – that organisms adapt to their environment. The many discoveries since then have essentially confirmed and strengthened Darwin's central theses, with latest evidence, for example, from
