Optimization is the most important sub area of the discipline Operations Research. Optimization problems arise in all walks of human activity- particularly in engineering, business, finance and economics. The simplest optimization problems are linear in nature which may be subject to a set of linear constraints.

Operations Research - Course

Optimal solutions are feasible solutions that achieve objective function value (s) as good as those of any other feasible solutions. For example, q = 200, r = 90 is feasible in constant-rate demand model (1.1) because both constraints are satisfied: 200 Ú 100 and 90 Ú 55.
