Supply chain management (SCM) strives for creating competitive advantage and value for customers by integrating business processes from end users through original suppliers. However, the question of how SCM influences the value of a firm is not fully answered. Various conceptual frameworks that explain the coherence of SCM and company value, comprehended as value-based SCM, are well accepted in scientific research, but quantitative approaches to value-based SCM are found rather seldom. The book contributes to this research gap by proposing quantitative models that allow for

assessing influences of SCM on the value of a firm. Opposed to existing models that limit the observation to chosen facets of SCM or selected value drivers, this holistic approach is adequate to

- reflect configurational and operational aspects of SCM,
- cover all phases of the product life cycle,
- financially compare value impacts of profitability-related and asset-related value drivers, and
- assess influences of dynamics and uncertainties on company value.

‘Perspective’ and ‘viewpoint’ are widely used in everyday talk as well as in the specialist languages of the social, cognitive, and literary sciences. Taken from the field of visual perception and representation,

these concepts have acquired a general meaning and significance, as characteristics of human cognitive processing. Since, however, this field is shared by an increasing body of disciplines, perspective terms have also acquired specific and technical meanings. A striking example is the newly introduced use of 'perspectivation' in discourse analysis. This volume on 'perspective and perspectivation' — the first of its kind — will help to fill the gap between the common understanding of perspective and the specifics of its structure and dynamics as they have been elaborated in the human sciences, mainly in psychology and linguistics. The focus is on the structure of perspectivity in cognition and language, and the

dynamics of setting and taking perspectives in social interaction and in the construction and understanding of texts. Both topics are presented here in an interdisciplinary way by a group of linguists and psychologists.

This volume presents an innovative new analytical framework for understanding the dynamics of violent conflict and its impact on people and communities living in contexts of violence. Bringing together the findings of MICROCON, an influential five year research programme funded by the European Commission, this book provides readers with the most current and comprehensive evidence available on

violent conflict from a micro-level perspective. MICROCON was the largest programme on conflict analysis in Europe from 2007-2011, and its policy outreach has helped to influence EU development policy, and supported policy capacity in many conflict-affected countries. Whilst traditional studies into conflict have been through an international /regional lens with the state as the primary unit of analysis, the micro-level perspective offered by this volume places the individuals, households, groups and communities affected by conflict at the centre of analysis. Studying how people behave in groups and communities; and how they interact with the formal and informal institutions that manage local tensions, is crucial to

understanding the conflict cycle. These micro-foundations therefore provide a more in-depth analysis of the causes and consequences of violent conflict. By challenging the ways we think about conflict, this book bridges the gap in evidence, allowing for more specific and accurate policy interventions for conflict resolution and development processes to help reduce poverty in the lives of those affected by conflict. This volume is divided into four parts. Part I introduces the conceptual framework of MICROCON. Part II focuses on individual and group motivations in conflict processes. Part III highlights the micro-level consequences of violent conflict. The final section of this volume focuses on policy
