traps may exist. The authors define a poverty trap as: “There will be a poverty trap whenever the scope for growing income or wealth at a very fast rate is limited for those who have too little to invest, but expands dramatically for those who can invest a bit more. On the other hand, if the potential for fast growth is high among the poor, and then tapers off as one gets richer, there is no poverty trap.”

WINNERS OF THE 2019 NOBEL PRIZE IN ECONOMICS Imagine you have a few million dollars. You want to spend it on the poor. How do you go about it? Billions of government dollars, and thousands of charitable organizations and NGOs, are dedicated to helping the world's poor. But much of their work is based on assumptions about the poor and the world that are untested generalizations at best, harmful misperceptions at worst. Abhijit V. Banerjee and Esther Duflo have pioneered the use of randomized control trials in development economics

through their award-winning Poverty Action Lab. They argue that by using randomized control trials, and more generally, by paying careful attention to the evidence, it is possible to make accurate—and often startling assessments—on what really impacts the poor and what doesn't. Why would a man in Morocco who doesn't have enough to eat buy a television? Why is it so hard for children in poor areas to learn even when they attend school? Why do the poorest people in Maharashtra spend 5 percent of their total budget on sugar? Does having lots of children actually make you

poorer? Drawing on their research at the Poverty Action Lab and their fifteen years of fieldwork in India and across the world, the two economists ask many such questions and show why the poor, despite having the same desires and abilities as anyone else, end up with entirely different lives. Revelatory and impassioned, Poor Economics is a pathbreaking book that will help you to understand the real causes of poverty and how to end it.

Understanding the daily decisions facing the poor.

The winners of the Nobel Prize show how economics, when done right, can help us solve the thorniest social and political problems of our day. Figuring out how to deal with today's critical economic problems is perhaps the great challenge of our time. Much greater than space travel or perhaps even the next revolutionary medical breakthrough, what is at stake is the whole idea of the good life as we have known it. Immigration and inequality, globalization and technological disruption,

slowing growth and accelerating climate change--these are sources of great anxiety across the world, from New Delhi and Dakar to Paris and Washington, DC. The resources to address these challenges are there--what we lack are ideas that will help us jump the wall of disagreement and distrust that divides us. If we succeed, history will remember our era with gratitude; if we fail, the potential losses are incalculable. In this revolutionary book, renowned MIT economists Abhijit V. Banerjee and Esther Duflo take on this challenge,

building on cutting-edge research in economics explained with lucidity and grace. Original, provocative, and urgent, Good Economics for Hard Times makes a persuasive case for an intelligent interventionism and a society built on compassion and respect. It is an extraordinary achievement, one that shines a light to help us appreciate and understand our precariously balanced world.

An encouraging account of the potential of foreign aid to reduce poverty and a challenge to all aid organizations to think

harder about how they spend their money. With more than a billion people now living on less than a dollar a day, and with eight million dying each year because they are simply too poor to live, most would agree that the problem of global poverty is our greatest moral challenge. The large and pressing practical question is how best to address that challenge. Although millions of dollars flow to poor countries, the results are often disappointing. In *Making Aid Work*, Abhijit Banerjee—an "aid optimist"—argues that aid has much to contribute, but the lack of analysis about

which programs really work causes considerable waste and inefficiency, which in turn fuels unwarranted pessimism about the role of aid in fostering economic development. Banerjee challenges aid donors to do better. Building on the model used to evaluate new drugs before they come on the market, he argues that donors should assess programs with field experiments using randomized trials. In fact, he writes, given the number of such experiments already undertaken, current levels of development assistance could focus entirely on programs with proven records

of success in experimental conditions. Responding to his challenge, leaders in the field—including Nicholas Stern, Raymond Offenheiser, Alice Amsden, Ruth Levine, Angus Deaton, and others—question whether randomized trials are the most appropriate way to evaluate success for all programs. They raise broader questions as well, about the importance of aid for economic development and about the kinds of interventions (micro or macro, political or economic) that will lead to real improvements in the lives of poor people around the world. * Our summary is short, simple and pragmatic. It allows you to have the essential ideas of a big book in less than 30 minutes. As you read this summary, you will discover that beyond the traditional anti-poverty policies that have emerged over the past decades, there is another way of looking at situations. You will also discover that : the poor have little access to information; the poor take responsibility for too many aspects of their lives; they

have no access to certain markets, such as credit, or at exorbitant prices; poor countries are not doomed to failure because they are poor; when a situation begins to improve, beliefs and certainties change.

Abhijit Banerjee and Esther Duflo rely on field studies with NGOs, government officials, health workers, etc., to support their work. They propose a new vision of poverty and, above all, ways of fighting it, through limited experiments and ingenious solutions proven in the field. They present not one, but models, based on the idea that it is by understanding the

Professional economists have to say about it. This volume brings together twenty-eight essays by some of the world leaders in the field, who were invited to tell the lay reader about the most important things they have learnt from their research that relate to poverty. The essays cover a wide array of topics: the first essay is about how poverty gets measured. The next section is about the causes of poverty and its persistence, and the ideas range from the impact of colonialism and globalization to the problems of "excessive" population growth, corruption and ethnic

conflict. The next section is about policy: how should we fight poverty? The essays discuss how to get drug companies to produce more vaccines for the diseases of the poor, what we should and should not expect from micro-credit, what we should do about child labor, how to design welfare policies that work better and a host of other topics. The final section is about where the puzzles lie: what are the most important anomalies, the big gaps in the way economists think about poverty? The essays talk about the puzzling reluctance of Kenyan farmers to fertilizers, the enduring
