This program explains how the Global Position System (GPS) works. A GPS receiver locates signals from four orbiting satellites and uses the information to calculate a position. The GPS system can be used to track speed and direction, the orientation of aircraft, and evidence of earthquakes or geological activity. Part of the Launch Pad series.

distance and direction from the reference point. Describing your location in this way defines your position. In the first example, the distance is one meter. The direction is to the left, and the reference point is your friend. In the second example, the distance is two houses. The direction is north, and the reference point is your school.
