These solutions reflect assignments made by Professor David Huse at Princeton University during his semester course on Condensed Matter Physics during the fall of 2006. There are certainly faults in the homeworks (and several solutions that could have been obtained much more directly); but in general, I have tried to correct any any mistakes noticed by the grader.

Solutions to Problems in Condensed Matter Physics

Condensed matter physics is the field of physics that deals with the macroscopic and microscopic physical properties of matter, especially the solid and liquid phases which arise from electromagnetic forces between atoms. More generally, the subject deals with "condensed" phases of matter, systems of very many constituents with strong interactions between them.

Condensed matter physics - Wikipedia

In fact, condensed matter physics is by far the largest single subfield of physics (the annual meeting of condensed matter physicists in the United States attracts over 6000 physicists each year!). Sadly a first introduction to the topic can barely scratch the surface of what constitutes the broad field of condensed matter.

The latter problem is also listed as one of the Millennium Prize Problems in mathematics. Upstream contamination: When pouring water from a higher container to a lower one, particles floating in the latter can climb upstream into the upper container. A definitive explanation for this phenomenon is still lacking. Condensed matter physics

The first part of this book contains E. Lieb's fundamental contributions to the mathematical theory of Condensed Matter Physics. Often considered the founding father of the field, E. Lieb demonstrates his ability to select the most important issues and to formulate them as well-defined mathematical problems and, finally, to solve them.
