A Book of the Year for The Economist and the Observer Our world seems to be collapsing. The daily news cycle reports the deterioration: divisive politics across the Western world, racism, poverty, war, inequality, hunger. While politicians, journalists and activists from all sides talk about the damage done, Johan Norberg offers an illuminating and heartening analysis of just how far we have come in tackling the greatest problems facing humanity. In the face of fear-mongering, darkness and division, the facts are unequivocal: the golden age is now.

A Book of the Year for The Economist and the Observer Our world seems to be collapsing. The daily news cycle reports the deterioration: divisive politics across the Western world, racism, poverty, war, inequality, hunger. While politicians, journalists and activists from all sides talk about the damage done, Johan Norberg offers an illuminating and heartening analysis of just how far we have come in tackling the greatest problems facing humanity. In the face of fear-mongering, darkness and division, the facts are unequivocal: the golden age is now.

AN ECONOMIST BOOK OF THE YEAR Humanity's embrace of openness is the key to our success. The freedom to explore and exchange - whether it's goods, ideas or people - has led to stunning achievements in science, technology and culture. As a result, we live at a time of unprecedented wealth and opportunity. So why are we so intent on ruining it? From Stone Age hunter-gatherers to contemporary Chinese-American relations, Open explores how across time and cultures, we have struggled with a constant tension between our yearning for co-operation and our profound need for belonging. Providing a bold new framework for understanding human history, bestselling author and thinker Johan Norberg examines why we're often uncomfortable with openness - but also why it is essential for progress. Part sweeping history and part polemic, this urgent book makes a compelling case for why an open world with an open economy is worth fighting for more than ever.

It's on the televisions, in the papers and in our minds. Every day were bludgeoned by news of how bad everything is-- financial collapse, unemployment, growing poverty, environmental disasters, disease, hunger, war. But the rarely acknowledged reality is that the economic and social progress of the past few decades has been unprecedented and that by almost any index you care to identify, things are markedly better now than they have ever been for almost everyone alive. Examining official data from the worlds most trusted institutions like the United Nations, the World Bank and the World Health Organization, political commentator Johan Norberg traces just how far we have come in tackling the greatest global problems. None of them have been eradicated, but as Norberg shows we now have a good idea of the solutions and have started to implement them in most areas. We know what it will take to see this progress continue. Dramatic, uplifting and sure to be divisive, Progress is a call for optimism in our pessimistic, doom-laden world.

INSTANT NEW YORK TIMES BESTSELLER " One of the most important books I ' ve ever read—an indispensable guide to thinking clearly about the world. " – Bill Gates " Hans Rosling tells the story of ' the secret silent miracle of human progress ' as only he can. But Factfulness does much more than that. It also explains why progress is so often secret and silent and teaches readers how to see it clearly. " —Melinda Gates "Factfulness by Hans Rosling, an outstanding international public health expert, is a hopeful book about the potential for human progress when we work off facts rather than our inherent biases." - Former U.S. President Barack Obama Factfulness: The stress-reducing habit of only carrying opinions for which you have strong supporting facts. When asked simple questions about global trends—what percentage of the world ' s population live in poverty; why the world ' s population is increasing; how many girls finish school—we systematically get the answers wrong. So wrong that a chimpanzee choosing answers at random will consistently outguess teachers, journalists, Nobel laureates, and investment bankers. In Factfulness, Professor of International Health and global TED phenomenon Hans Rosling, together with his two long-time collaborators, Anna and Ola, offers a radical new explanation of why this happens. They reveal the ten instincts that distort our perspective—from our tendency to divide the world into two camps (usually some version of us and them) to the way we consume media (where fear rules) to how we perceive progress (believing that most things are getting worse). Our problem is that we don ' t know what we don ' t know, and even our guesses are informed by unconscious and predictable biases. It turns out that the world, for all its imperfections, is in a much better state than we might think. That doesn ' t mean there aren ' t real concerns. But when we worry about everything all the time instead of embracing a worldview based on facts, we can lose our ability to focus on the things that threaten us most. Inspiring and revelatory, filled with lively anecdotes and moving stories, Factfulness is an urgent and essential book that will change the way you see the world and empower you to respond to the crises and opportunities of the future. --- " This book is my last battle in my life-long mission to fight devastating ignorance...Previously I armed myself with huge data sets, eye-opening software, an energetic learning style and a Swedish bayonet for sword-swallowing. It wasn ' t enough. But I hope this book will be. " Hans Rosling, February 2017.

Marshalling facts and the latest research findings, the author systematically refutes the adversaries of globalization, markets, and progress. This book will change the debate on globalization in this country and make believers of skeptics.

"Ten Global Trends Every Smart Person Should Know is a pleasure: gorgeous, self-contained vignettes on human progress, which you can sample at your leisure or devour in a sitting. " —Steven Pinker, author of Enlightenment Now: The Case for Reason, Science, Humanism, and Progress Think the world is getting worse? If so, you ' re wrong. The world is, for the most part, actually getting better. But 58 percent of people in 17 countries who were surveyed in 2016 thought that the world was either getting worse or staying the same. Americans were even more glum: 65 percent thought the world was getting worse and only 6 percent thought it was getting better. The uncontroversial data on major global trends in this book will persuade you that this dark view of the state of humanity and the natural world is, in large part, badly mistaken. World population will peak at 8–9 billion before the end of this century, as the global fertility rate continues its fall from 6 children per woman in 1960 to the current rate of 2.4. The global absolute poverty rate has fallen from 42 percent in 1981 to 8.6 percent today. Satellite data show that forest area has been expanding since 1982. Natural resources are becoming ever cheaper and more abundant. Since 1900, the average life expectancy has more than doubled, reaching more than 72 years globally. Of course, major concerns such as climate change, marine plastic pollution, and declining wildlife populations are still with us, but many of these problems are already being ameliorated as a result of the favorable economic, social, and technological trends that are documented in this book. You can ' t fix what is wrong in the world if you don ' t know what ' s actually happening. Ten Global Trends Every Smart Person Should Know will provide busy people with quick-to-read, easily understandable, and entertaining access to surprising facts that they need to know about how the world is really faring.

Is civilization teetering on the edge of a cliff? Or are we just climbing higher than ever? Most people who read the news would tell you that 2017 is one of the worst years in recent memory. We're facing a series of deeply troubling, even existential problems: fascism, terrorism, environmental collapse, racial and economic inequality, and more. Yet this narrative misses something important: by almost every meaningful measure, the modern world is better than it ever has been. In the United States, disease, crime, discrimination, and most forms of pollution are in long-term decline, while longevity and education keep rising and economic indicators are better than in any past generation. Worldwide, malnutrition and extreme poverty are at historic lows, and the risk of dying by war or violence is the lowest in human history. It's not a coincidence that we're confused--our perspectives on the world are blurred by the rise of social media, the machinations of politicians, and our own biases. Meanwhile, political reforms like the Clean Air Act and technological innovations like the hybridization of wheat have saved huge numbers of lives. In that optimistic spirit, Easterbrook offers specific policy reforms to address climate change, inequality, and other problems, and reminds us that there is real hope in conquering such challenges. In an age of discord and fear-mongering, It's Better Than It Looks will profoundly change your perspective on who we are, where we're headed, and what we're capable of.

INSTANT NEW YORK TIMES BESTSELLER A NEW YORK TIMES NOTABLE BOOK OF 2018 ONE OF THE ECONOMIST'S BOOKS OF THE YEAR "My new favorite book of all time." --Bill Gates If you think the world is coming to an end, think again: people are living longer, healthier, freer, and happier lives, and while our problems are formidable, the solutions lie in the Enlightenment ideal of using reason and science. By the author of the new book, Rationality. Is the world really falling apart? Is the ideal of progress obsolete? In this elegant assessment of the human condition in the third millennium, cognitive scientist and public intellectual Steven Pinker urges us to step back from the gory headlines and prophecies of doom, which play to our psychological biases. Instead, follow the data: In seventy-five jaw-dropping graphs, Pinker shows that life, health, prosperity, safety, peace, knowledge, and happiness are on the rise, not just in the West, but worldwide. This progress is not the result of some cosmic force. It is a gift of the Enlightenment: the conviction that reason and science can enhance human flourishing. Far from being a naïve hope, the Enlightenment, we now know, has worked. But more than ever, it needs a vigorous defense. The Enlightenment project swims against currents of human nature--tribalism, authoritarianism, demonization, magical thinking--which demagogues are all too willing to exploit. Many commentators, committed to political, religious, or romantic ideologies, fight a rearguard action against it. The result is a corrosive fatalism and a willingness to wreck the precious institutions of liberal democracy and global cooperation. With intellectual depth and literary flair, Enlightenment Now makes the case for reason, science, and humanism: the ideals we need to confront our problems and continue our progress.

In The Progress Paradox, Gregg Easterbrook draws upon three decades of wide-ranging research and thinking to make the persuasive assertion that almost all aspects of Western life have vastly improved in the past century—and yet today, most men and women feel less happy than in previous generations. Detailing the emerging science of " positive psychology, " which seeks to understand what causes a person ' s sense of well-being, Easterbrook offers an alternative to our culture of crisis and complaint. He makes a compelling case that optimism, gratitude, and acts of forgiveness not only make modern life more fulfilling but are actually in our self-interest. An affirming and constructive way of seeing life anew, The Progress Paradox will change the way you think about your place in the world—and about our collective ability to make it better.
