"The case studies in this book show that learning mentors are indispensable to supporting school improvement. Thirty five studies of best practice illustrate the day to day experience of learning mentors and how they improve children's learning, participation, personal development and well-being. They are contextualised within theories of child development, learning and notions of educational equality and take account of school management and multi-agency working." "This is the first book on learning mentors to present case studies and offer such detailed guidance for good practice, and it will be indispensable in both primary and secondary schools."--BOOK

JACKET:

Assessing the effects of New Labour's education policies on primary schools, this book discusses the impact of policies on primary school practices, as well as looking at the views and experiences of primary school teachers and pupils.

In this fascinating book, Jenny Houssart draws on close observations with children in lower mathematics sets in primary schools to investigate why some children opt out of mathematics at an early age. After introducing us to the children, she addresses a particular type of mathematical task in each chapter, including:

computers assessment tasks.
Through the use of stories and
quotes, the author shows how the
children respond to specific tasks
and presents evidence of a range
of difficulties that emerge as the
children are working. Each
chapter ends with discussions and
implications for classroom
practice. *Low Attainers in Primary

insights from this highly readable
book.

The world of teacher research is

rapidly changing following the introduction of Best Practice Research Scholarships. This was announced by the DfEE as part of a new Professional Development Plan in which teachers are to be allocated up to £3000 to do their own research (non-award bearing) with the support of an HE mentor. The TTA also believes that teachers should play a more active role in conceiving, implementing, evaluating and disseminating research. This book is for teachers who are looking, or being encouraged, to undertake research in their schools. Written by teachers and their HE research mentors, the book provides case studies which show teachers how to 'do' and 'use' research and how to 'do' effective pedagogy. Olwen

MacNamara shows how a group of teachers set out to observe, describe, analyse and intervene in areas of primary education. The book can be raided for insights into research methods as well detailing professional issues about teaching and learning, and will be essential reading for teachers undertaking Best Practice Research Scholarships.

Volume, allowing readers to follow the themes of their work and see how it contributes to the development of the field. Mary James has researched and written on a range of educational subjects which encompass curriculum, pedagogy and assessment in schools, and implications for teachers' professional development, school leadership and policy frameworks. She has written many books and journals on assessment, particularly assessment for learning and is an expert on teacher learning, curriculum, leadership for learning and educational policy. Starting with a specially written introduction in which Mary gives an overview of her career and contextualises her

trainee and practising primary teachers build their confidence in ICT and encourage them to think above and beyond the QCA Scheme of Work.

'Tackles an area of the curriculum many teachers lack confidence in.' 'Lots of good starting points'. 'Spans a lot of material and is strong on diverse learning styles.' 'Clear explanation and good visual layout, very innovative in approach.' - Judging Panel for NASEN/TES Book Award 'The book is rich in lively teaching suggestions and in insights into the impact of different forms of explanation' - Debate '[C]arries us away from narrow views of ability

and special needs and into the consideration of difference. The author takes us through lively discussions of many aspects of mathematics learning. Each section offers learning and teaching ideas involving visual and kinaesthetic approaches. The book is a compendium of sound ideas rather than a collection of startlingly new approaches. But throughout it has the great strength of being exceptionally clear in its arguments, descriptions and drawings. The design is generally helpful with plenty of illustrations, as befits the book's message. There are handy pages of photocopiable resources. This is a lively and often passionate account of ways of ensuring that multi-sensory

Approaches infect mathematics learning. As the author says, "pictures in the mind can help all pupils". We might add, "They help all teachers too" - TES Extra for Special Needs 'If you have found pupils struggling to understand some aspects of mathematics at any age then this book is for you. It is a very readable book that would interest all those who work in classrooms, whether as a teacher or support worker with all ages and abilities, for those who work with older pupils as it gives possible approaches to use with those for whom basic skills are weak or have difficulty in understanding some of the concepts required of GCSE examinations' - Alison Parish, Second in Mathematics

Department, Stowmarket High School, Suffolk Read the full review as posted on the Association of Teachers of Mathematics website! 'It is a highly practical book. One strength is the way that it develops a topic from the very basics through to the harder concepts. There are a large number of activities that are 'ready to run' but these really are just a starting point for teachers to begin thinking about teaching topics in a different way, and from these teachers will be able to develop their own approach. Although this book is focusing on pupils who are visual and kinaesthetic learners, the great majority of learners adopt a mixture of learning styles, so this

Approach will benefit the entire class. Worth a read!' - Maths Coordinator's File 'This excellent and very informative teaching resource is about teaching mathematics to pupils who have learning differences. [It] is very practical and easy to read. A really nice feature is the inclusion of photocopiable resource sheets allowing readers to try out easily the ideas suggested in the book. This resource is highly recommended and will be very suitable for maths teachers in primary and secondary schools, SENCOs and teaching assistants' - British Journal of Special Education 'This book is about making mathematics visible and tangible -- not something that just lies flat on the page. It will provide instantly usable suggestions across a variety of topics at different levels: from early number concepts through to fractions and ratios, algebra, aspects of geometry (including angles and circles), and data handling. When you get a chance to read it more thoroughly you will find arguments for using these approaches, consideration of some of the pitfalls to avoid, and inspiration to develop different ways of helping students to achieve deep and connected understandings. For any teacher who wants to provide students with opportunities for visual and kinaesthetic learning in mathematics' - The Australian Association of Mathematics Teachers Inc. 'A very good book,

Offering teachers, SENCOs and teaching assistants guidelines, strategies and practical activities to access the thought processes of pupils with different learning styles. It has an easy-to-read format giving suggestions, rather than dictat, on the use of "models to think" and is a unique document for those who have input into the furthering of the teaching and learning of mathematics' - Mathematics in School How can you make maths exciting and meaningful for all your pupils? Some pupils find even basic concepts in mathematics difficult to grasp and it can be a challenge to make lessons accessible to all. This book offers practising teachers a range of approaches to making

maths clear for struggling students. It looks at the different ways in which maths can be taught so that pupils with different learning styles can be stimulated. Maths is visible and tangible - not something that just lies flat on the page. Included are:

- ideas to be used in lessons -
- suggestions for exciting, visual ways to teach basic concepts -
- lots of practical advice and guidance. The book shows teachers how to unlock mathematics for all their learners, and it encourages the use of a variety of methods to teach the subject. It provides a valuable resource for maths teachers in both primary and secondary schools, for SENCOs and teaching assistants, and for those

Together provides a refreshing and much-needed focus on how motivation can be enhanced by teachers and teaching assistants working both individually and collaboratively. Written in an accessible and engaging manner, the book explores various theories of motivation from a range of perspectives, applying academic theory to real life classroom situations. Using a combination of case studies and empirical research, this book demonstrates how teachers and TAs can successfully enhance the motivation of their students through collaborative practice. Improving Pupils Motivation Together starts by introducing theories of learning and motivation and goes on to offer

Insight in areas including:

Collaboration and ways to collaborate; Motivation and giftedness; Assessment for Learning; Learning goals and learning objectives; Common pupil responses; Research in Action. Improving Pupils Motivation Together is an ideal resource for both teachers and teaching assistants working with pupils who are difficult to motivate and who find learning challenging. Further, this book will be highly useful for teachers managing their support staff, and for trainee teachers looking to develop their skills in motivating and engaging pupils.
