Part 1

outlines one of the most promising new developments in architecture, engineering, and construction (AEC). Building information modeling (BIM) is an information management and analysis technology that is changing the role of

computation in the

industries. The  
innovative process  
constructs a  
database  
assembling all of  
the objects needed  
to build a specific  
structure. Instead  
of using a  
computer to  
produce a series of

drawings that together describe the building, BIM creates a single illustration representing the building as a whole. This book highlights the BIM technology and explains how it is redefining the structural analysis and design of

Framework Enabler

Rand  
This book  
introduces a new  
framework—the  
structure and  
architecture  
synergy framework  
(SAS

framework)—that  
helps develop and  
enhance the  
understanding of

analysis using BIM  
tools. Based upon  
three main  
components: the  
structural melody,  
structural poetry,  
and structural  
analysis, along with  
the BIM tools as the  
frame enabler, this  
new framework

allows users to explore structural design as an art while also factoring in the principles of engineering. The framework stresses the influence structure can play in form generation and in defining spatial order and composition. By highlighting the

interplay between  
architecture and

emphasizes the
