Robotic process automation (or RPA) is a form of business process automation technology based on metaphorical software robots (bots) or on artificial intelligence (AI)/digital workers. It is sometimes referred to as software robotics (not to be confused with robot software). In traditional workflow automation tools, a software developer produces a list of actions to automate a task and interface to the back-end system using internal application programming interfaces

Robotic process automation - Wikipedia

Robotic Process Automation is the technology that allows anyone today to configure computer software, or a “robot” to emulate and integrate the actions of a human interacting within digital systems to execute a business process. RPA robots utilize the user interface to capture data and manipulate applications just like humans do. They interpret, trigger responses and communicate with other systems in order to perform on a vast variety of repetitive tasks. Only

What is Robotic Process Automation (RPA) in Banking? At its core, Robotic Process Automation (RPA) is used by banks and other financial institutions to automate manual business processes so the banks can remain competitive in today's market. If implemented properly, banks can start to see a positive ROI from RPA in as little as 4 weeks.

Software robots are easy to configure and do not require extensive IT knowledge. By deploying these, organizations can use RPA to automate manual tasks, such as copy and pasting data between applications or reconciling and cross-referencing data. For internal audit, RPA presents both opportunity and responsibility.
