University science is reasonably correct, as it relates to balls. In Rocket Science for Babies, the science involved is completely wrong. Rockets do NOT use wings for lift, especially not in space. I've had to remove this book from reading rotation since it's just plain wrong.

Rocket Science for Babies (Baby University): Ferrie, Chris ...

This book couldn't decide if it was about aerospace or rocket science. It mentioned putting wings on rockets traveling in space, which is inaccurate. The concepts of lift and drag do not make sense in space. I like the idea of introducing science to babies and young children, but it defetes the purpose if it is incorrect.
