Informed consent - as an ethical ideal and legal doctrine - has been the source of much concern to clinicians. Drawing on a diverse set of backgrounds and two decades of research in clinical settings, the authors - a lawyer, a physician, a social scientist, and a philosopher - help clinicians understand and cope with their legal obligations and show how the proper handling of informed consent can improve, rather than impede, patient care. Following a concise review of the ethical and legal foundations of informed consent, they provide detailed, practical suggestions for incorporating informed consent into clinical practice. This completely revised and updated edition discusses how to handle informed consent in all phases of the doctor-patient relationship, use of consent forms, patients' refusals of treatment, and consent to research. It comments on recent laws and national policy, and addresses cutting edge issues, such as fulfilling physician obligations under managed care. This clear and succinct book contains a wealth of information that will not only help clinicians meet the legal requirements of informed consent and understand its ethical underpinnings, but also enhance their ability to deal with their patients more effectively. It will be of value to all those working in areas where issues of informed consent are likely to arise, including medicine, biomedical research, mental health care, nursing, dentistry, biomedical ethics, and law.

By managing the information we make it available and provide a basis for sharing our knowledge and understanding. Volume 2 presents illustrated examples from around the world. Good documentation of a site allows for better understanding of the site's value. Recognizing value and significance is often the first step toward a site's eventual conservation. The information obtained through the documentation process allows conservation professionals to record current conditions, consider appropriate conservation options, plan interventions, apply treatments, and finally, measure the results of their efforts. Occupational Science: The Evolving Discipline presents the most current and comprehensive information on the development of occupational science. This exciting resource offers stimulating ideas about occupation and its implications for health and occupational therapy practice. The papers in this book, most of which are from presentations at the Occupational Science Symposia, reflect an extensive range of perspectives. Presentations by Stephen Hawking, Jane Goodall, and Mary Catherine Bateson are included, as well as other invited and peer-reviewed presentations. In these papers, experienced scholars share their ideas, hypotheses, and preliminary research, tying together the theory behind the study of occupational science. Each section of the book begins with a detailed introduction in which Zemke and Clark describe the relationship of each paper to the study of occupational science. This unique text provides an understanding of occupation that will give therapists a heightened concern for those activities in which their patients invest their energies and time, a better understanding of how participation in occupation shapes self-identity, a way to identify the motivating factors for participation in occupation, and knowledge of how patients can enhance their life opportunities.
