Seven Secrets is the second studio album by North Irish progressive rock band Fruupp, released on 19 April 1974 in the United Kingdom on the Dawn Records label, a subsidiary of Pye Records for underground and progressive rock music. Like the band's debut album, it was recorded at Escape Studios in Egerton, Kent, but was this time produced by David Lewis, the frontman of another North Irish rock band Andwell. Before Fruupp entered the recording studio, they had written six songs, but felt that t

This book highlights new advances in biometrics using deep learning toward deeper and wider background, deeming it “ Deep Biometrics ”. The book aims to highlight recent developments in biometrics using semi-supervised and unsupervised methods such as Deep Neural Networks, Deep Stacked Autoencoder, Convolutional Neural Networks, Generative Adversary Networks, and so on. The contributors demonstrate the power of deep learning techniques in the emerging new areas such as privacy and security issues, cancellable biometrics, soft biometrics, smart cities, big biometric data, biometric banking, medical biometrics, healthcare biometrics, and biometric genetics, etc. The goal of this volume is to summarize the recent advances in using Deep Learning in the area of biometric security and privacy toward deeper and wider applications. Highlights the impact of deep learning over the field of biometrics in a wide area; Exploits the deeper and wider background of biometrics, such as privacy versus security, biometric big data, biometric genetics, and biometric diagnosis, etc.; Introduces new biometric applications such as biometric banking, internet of things, cloud computing, and medical biometrics.

Hibis Temple, tucked away in the remote Khargeh Oasis, contains the longest monumental hymns to Amun-Re ever carved in hieroglyphs. These religious texts, inscribed during the reign of Darius I, drew upon a large variety of New Kingdom sources, and later they served as sources for the Graeco-Roman hymns at Esna Temple. As such, the hymns to Amun-Re from Hibis are excellently suited for studying Egyptian theology during the Persian Period, on the eve of the supposed "new theology" created by the Graeco-Roman priesthood. This new study, the first extensive commentary on the five liturgically connected hymns, features new translations with detailed notes. The book also considers dominant theological themes present in the texts, including the concept of "Amun within the Iris."

These are the proceedings of the International Conference on ISMAC-CVB, held in Palladam, India, in May 2018. The book focuses on research to design new analysis paradigms and computational solutions for quantification of information provided by object recognition, scene understanding of computer vision and different algorithms like convolutional neural networks to allow computers to recognize and

detect objects in images with unprecedented accuracy and to even understand the relationships between them. The proceedings treat the convergence of ISMAC in Computational Vision and Bioengineering technology and includes ideas and techniques like 3D sensing, human visual perception, scene understanding, human motion detection and analysis, visualization and graphical data presentation and a very wide range of sensor modalities in terms of surveillance, wearable applications, home automation etc. ISMAC-CVB is a forum for leading academic scientists, researchers and research scholars to exchange and share their experiences and research results about all aspects of computational vision and bioengineering.

Bernard Jensen, who pioneered Iridology in the United States, presents a basic introduction to this science which analyzes the delicate structures of the iris to reveal and locate inflammation in the body. Readers are given an explanation of how the chart works, including detailed illustrations of iris topography showing individual systems charts, and over two dozen color photographs of irises diagnosing stages of different ailments. This book supports Jensen's belief that iridology is an important element in the total, holistic health care program.

In the field of computers and with the advent of the internet, the topic of secure communication has gained significant importance. The theory of cryptography and coding theory has evolved to handle many such problems. The emphases of these topics are both on secure communication that uses encryption and decryption schemes as well as on user authentication for the purpose of non-repudiation. Subsequently, the topics of distributed and cloud computing have emerged. Existing results related to cryptography and network security had to be tuned to adapt to these new technologies. With the more recent advancement of mobile technologies and IOT (internet of things), these algorithms had to take into consideration the limited resources such as battery power, storage and processor capabilities. This has led to the development of lightweight cryptography for resource constrained devices. The topic of network security also had to face many challenges owing to variable interconnection topology instead of a fixed interconnection topology. For this reason, the system is susceptible to various attacks from eavesdroppers. This book addresses these issues that arise in present day computing environments and helps the reader to overcome these security threats.

Presenting the first definitive study of the subject, this Handbook of Biometric Anti-Spoofing reviews the state of the art in covert attacks against biometric systems and in deriving countermeasures to these attacks. Topics and features: provides a detailed introduction to the field of biometric anti-spoofing and a thorough review of the associated literature; examines spoofing attacks against five biometric modalities, namely, fingerprints, face, iris, speaker and gait; discusses anti-spoofing measures for multi-model biometric systems; reviews evaluation methodologies, international standards and legal and ethical issues; describes current challenges and suggests directions for future research; presents the latest work from a global selection of experts in the field, including members of the TABULA RASA project.
