The baby owls came out of their house, and they sat on the tree and waited. A big branch for Sarah, a small branch for Percy, and an old piece of ivy for Bill. When three baby owls awake one night to find their mother gone, they can't help but wonder where she is. Stunning illustrations from unique and striking perspectives capture the owls as they worry about their mother: What is she doing? When will she be back? What scary things move all around them? Not surprisingly, a joyous flapping and dancing and bouncing greets her return, lending a celebratory tone to the ending of this comforting tale. Never has the plight of young ones who miss their mother been so simply told or so beautifully rendered.

We've all been there--trapped in a conversation with smarty-pants music fiends, not wanting to let on that we haven't the slightest idea what they're talking about. This book is here to define every single sacred totem of rock fandom's know-it-all fraternity. The dictionary is the brainchild of Vanity Fair writers Kamp and Daly, who originally devised it as a short feature in the magazine's music issue. The response was so great (and grateful) that the feature became a running series, and now it's been expanded into a book that features new material and supplements. The book is as funny as it is informative, for it does something that no previous rock reference has dared to do: not take rock fandom so darned seriously.--From publisher description.

This book provides a comprehensive introduction to embedded flash memory, describing the history, current status, and future projections for technology, circuits, and systems applications. The authors describe current main-stream embedded flash technologies from floating-gate 1Tr, floating-gate with split-gate (1.5Tr), and 1Tr/1.5Tr SONOS flash technologies and their successful creation of various applications. Comparisons of these embedded flash technologies and future projections are also provided. The authors demonstrate a variety of embedded applications for auto-motive, smart-IC cards, and low-power, representing the leading-edge technology developments for eFlash. The discussion also includes insights into future prospects of application-driven non-volatile memory technology in the era of smart advanced automotive system, such as ADAS (Advanced Driver Assistance System) and IoE (Internet of Everything). Trials on technology convergence and future prospects of embedded non-volatile memory in the new memory hierarchy are also described. Introduces the history of embedded flash memory technology for micro-controller products and how embedded flash innovations developed; Includes comprehensive and detailed descriptions of current main-stream embedded flash memory technologies, sub-system designs and applications; Explains why embedded flash memory requirements are different from those of stand-alone flash memory and how to achieve specific goals with technology development and circuit designs; Describes a mature and stable floating-gate 1Tr cell technology imported from stand-alone flash memory products - that then introduces embedded-specific split-gate memory cell technologies based on floating-gate storage structure and charge-trapping SONOS technology and their eFlash sub-system designs; Describes automotive and smart-IC card applications requirements and achievements in advanced eFlash beyond 40nm node.
