2001: A Space Odyssey is a 1968 epic science fiction film produced and directed by Stanley Kubrick. The screenplay was written by Kubrick and Arthur C. Clarke, and was inspired by Clarke's 1951 short story " The Sentinel " and other short stories by Clarke. A novel released after the film's premiere was in part written concurrently with the screenplay.

2001: A Space Odyssey

The definitive story of the making of 2001: A Space Odyssey, acclaimed today as one of the greatest films ever made, and of director Stanley Kubrick and writer Arthur C. Clarke—“a tremendous explication of a tremendous film....Breathtaking” (The Washington Post). Fifty years ago a strikingly original film had its premiere. Still acclaimed as one of the most remarkable and important motion pictures ever made, 2001: A Space Odyssey depicted the first contacts between humanity and extraterrestrial intelligence. The movie was the product of a singular collaboration between Stanley Kubrick and science fiction visionary Arthur C. Clarke. Fresh off the success of his cold war satire Dr. Strangelove, Kubrick wanted to make the first truly first-rate science fiction film. Drawing from Clarke’s ideas and with one of the author’s short stories as the initial inspiration, their bold vision benefited from pioneering special effects that still look extraordinary today, even in an age of computer-generated images. In Space Odyssey, author, artist, and award-winning filmmaker Michael Benson “delivers expert inside stuff” (San Francisco Chronicle) from his extensive research of Kubrick’s and Clarke’s archives. He has had the cooperation of Kubrick’s widow, Christiane, and interviewed most of the key people still alive who worked on the film. Drawing also from other previously unpublished interviews, Space Odyssey provides a 360-degree view of the film from its genesis to its legacy, including many previously untold stories. And it features dozens of photos from the making of the film, most never previously published. “At last! The dense, intense, detailed, and authoritative saga of the making of the greatest motion picture I’ve ever seen...Michael Benson has done the Cosmos a great service” (Academy Award-winning actor Tom Hanks).

Part visual majesty, part meticulous science, part limitless imagination. Previously available as part of the multi-volume and instant sell-out Collector's Edition, this exhaustive compendium of photographs, pre-production paintings, and conceptual designs explores the genius behind 2001: A Space Odyssey, the sci-fi classic that remains the...

"If 2001 has stirred your emotions, your subconscious, your mythological yearnings, then it has succeeded."--Stanley Kubrick
Stanley Kubrick's extraordinary movie 2001: A Space Odyssey was released in 1969. The critics initially disliked it, but the public loved it. And eventually, the film took its rightful place as one of the most innovative, brilliant, and pivotal works of modern cinema. The Making of 2001: A Space Odyssey consists of testimony from Kubrick's collaborators and commentary from critics and historians. This is the most complete book on the film to date--from Stanley Kubrick's first meeting with screenwriter Arthur C. Clarke to Kubrick's exhaustive research to the actual shooting and release of the movie.

Stanley Kubrick is generally acknowledged as one of the world’s great directors. Yet few critics or scholars have considered how he emerged from a unique and vibrant cultural milieu: the New York Jewish intelligentsia. Stanley Kubrick reexamines the director’s work in context of his ethnic and cultural origins. Focusing on several of Kubrick’s key themes—including masculinity, ethical responsibility, and the nature of evil—it demonstrates how his films were in conversation with contemporary New York Jewish intellectuals who grappled with the same concerns. At the same time, it explores Kubrick’s fraught relationship with his Jewish identity and his reluctance to be pegged as an ethnic director, manifest in his removal of Jewish references and characters from stories he adapted. As he digs deep into rare Kubrick archives to reveal insights about the director’s life and times, film scholar Nathan Abrams also provides a nuanced account of Kubrick’s cinematic artistry. Each chapter offers a detailed analysis of one of Kubrick’s major films, including Lolita, Dr. Strangelove, 2001, A Clockwork Orange, Barry Lyndon, The Shining, Full Metal Jacket, and Eyes Wide Shut. Stanley Kubrick thus presents an illuminating look at one of the twentieth century’s most renowned and yet misunderstood directors.

This edited volume seeks to bring to light the impact of the ‘new’ Kubrick studies upon the ‘old’ Kubrick studies and collate together original insights, and textual and interpretative analyses of 2001: A Space Odyssey. By revising the formalist approaches in Kubrick Studies and conflating it with new empirical approaches, we can arrive at a broader understanding of the means and ways in which Kubrick’s methods as a director were developed to create a unique aesthetic creation and a film that changed cinematic language radically. Approaching the 50th anniversary of its release, 2001’s reputation is cemented as one of the greatest and most influential films ever made, regularly appearing in polls of the most important movies. And the film is still years ahead in its design, vision and philosophical structure. Contributions come largely from emerging scholarly voices within Film Studies, bringing new and innovative approaches to a film they share a common passion for.

Author wrote bestselling bfi Publishing title David Lynch 'a joy to the reader of film criticism' Choice; 2001: A Space Odyssey to be re-released in cinemas in The Spring and highly likely to be the focus of much media attention in the new year; Stanley Kubrick's 2001: A Space Odyssey (1968), based on Arthur C Clarke's novel, is one of the most ambitious films ever made. an epic of space exploration that takes in the whole history of humanity (as well as speculation about its future). A technical triumph that stands up today 2001 is topical also because of its meditation on the relationship between man, animal and machine. Haunting and enigmatic, it's a film that contains myriad images that seem to defy any explanation. In this multilayered study, acclaimed critic and theorist of film sound Michel Chion offers some keys to understanding 2001. Setting the film first in its historical and cultural contexts (the Space Race, the Cold War, 1960s psychedelia), Chion goes on to locate it within Kubrick's career. He then conducts a meticulous and subtle analysis of its structure and style, arguing that 2001 is an 'absolute film', a unique assemblage of cinema's elements, through which pulses a vision of human existence. 'Animals who know they will die, beings lost on earth, forever caught between two species, not animal enough, not cerebral enough.' In a supplementary chapter Chion argues that Kubrick's last film, Eyes Wide Shut (1999), is a return to 2001, a final statement of its concerns. And in a series of appendices Chion provides production details, an analytic synopsis, credits and a consideration of the legacy of 2001.

Hugo and Locus Award Finalist An Economist Best Book of the Year A Milwaukee Journal Sentinel Best Book of 2018 “An amazing and engrossing history...Insightful, entertaining, and compulsively readable.” — George R. R. Martin Astounding is the landmark account of the extraordinary partnership between four controversial writers—John W. Campbell, Isaac Asimov, Robert A. Heinlein, and L. Ron Hubbard—who set off a revolution in science fiction and forever changed our world. This remarkable cultural narrative centers on the figure of John W. Campbell, Jr., whom Asimov called “the most powerful force in science fiction ever.” Campbell, who has never been the subject of a biography until now, was both a visionary author—he wrote the story that was later filmed as The Thing—and the editor of the groundbreaking magazine best known as Astounding Science Fiction, in which he discovered countless legendary writers and published classic works ranging from the I, Robot series to Dune. Over a period of more than thirty years, from the rise of the pulps to the debut of Star Trek, he dominated the genre, and his three closest collaborators reached unimaginable heights. Asimov became the most prolific author in American history; Heinlein emerged as the leading science fiction writer of his generation with the novels Starship Troopers and Stranger in a Strange Land; and Hubbard achieved lasting fame—and infamy—as the founder of the Church of Scientology. Drawing on unexplored archives, thousands of unpublished letters, and dozens of interviews, Alec Nevala-Lee offers a riveting portrait of this circle of authors, their work, and their tumultuous private lives. With unprecedented scope, drama, and detail, Astounding describes how fan culture was born in the depths of the Great Depression; follows these four friends and rivals through World War II and the dawn of the atomic era; and honors such exceptional women as Doña Campbell and Leslyn Heinlein, whose pivotal roles in the history of the genre have gone largely unacknowledged. For the first time, it reveals the startling extent of Campbell’s influence on the ideas that evolved into Scientology, which prompted Asimov to observe: “I knew Campbell and I knew Hubbard, and no movement can have two Messiahs.” It looks unsparingly at the tragic final act that estranged the others from Campbell, bringing the golden age of science fiction to a close, and it illuminates how their complicated legacy continues to shape the imaginations of millions and our vision of the future itself. “Enthralling...A clarion call to enlarge American literary history.” — Washington Post “Engrossing, well-researched... This sure-footed history addresses important issues, such as the lack of racial diversity and gender parity for much of the genre’s history.” — Wall Street Journal “A gift to science fiction fans everywhere.” — Sylvia Nasar, New York Times bestselling author of A Beautiful Mind

It began four million years ago with a gleaming black monolith - an inexplicable apparition that ignited the spark of human consciousness transforming ape into man.
