Raft foundation is actually a thick concrete slab resting on a large area of soil reinforced with steel, supporting columns or walls and transfer loads from the structure to the soil. Usually, mat foundation is spread over the entire area of the structure it is supporting.

Raft Foundation - When to Use, Types, Construction - Civil ...

Home / Structural Engineering / Foundation Design A raft or mat foundation is a sizable concrete slab or slab-and-beam system which supports all the loads of superstructure through walls or columns in two or more rows and rests on soil layer or rock. A raft foundation may be rectangular (Fig. 1) or circular (Fig. 3).

Optimum Design Of Reinforced Concrete Raft Foundations ...

Excel sheet to Design of Raft Foundation
Raft foundation is a reinforced concrete slab under the whole of a building or extension, 'floating' on the ground as a raft floats on water. This type of foundation spreads the load of the building over a larger area than other foundations, lowering the pressure on the ground.
