Studies on the ideas and institutions of Western civilization from 200 A.D. to 1500 A.D.

This book is designed to give the reader an up-to-date account of the history of European civilization from its medieval origins to the present. Its theme is the interplay among individuals, groups, and cultures within a common civilization. Each of these "protagonists" has shaped the others without losing its identity or autonomy.

This one thousand year history of the civilization of western Europe has already been

recognized in France as a scholarly contribution of the highest order and as a popular classic. Jacques Le Goff has written a book which will not only be read by generations of students and historians, but which will delight and inform all those interested in the history of medieval Europe. Part one, *Historical Evolution*, is a narrative account of the entire period, from the barbarian settlement of Roman Europe in the fifth, sixth and seventh centuries to the war-torn crises of Christian Europe in the fourteenth and fifteenth centuries. Part two, *Medieval Civilization*, is analytical, concerned with the origins of early medieval ideas of culture and religion, the constraints of time and space in a pre-industrial world and the reconstruction of the lives and sensibilities of the people during this long period. *Medieval Civilization* combines the narrative and descriptive power characteristic of Anglo-Saxon scholarship with the sensitivity and insight of the French historical tradition.

In the Middle Ages, a varied and vibrant Islamic culture flourished in all its aspects, from religious institutions to legal and scientific endeavors. Lassner, Reisman, and Bonner detail how all three monotheistic traditions are linked to the same sacred history. They trace the most current scholarship on the Arabian background to Islam, the prophet's early religious message and its appeal. They discuss the Qur'an and how it would have been understood by the earliest generations of Muslims. How much does historical memory come into play in current depictions of this early era? Beyond religious institutions, Muslim scholars and scientists were vital to both the transmission of knowledge from the Greek civilization and to the uninterrupted progress of science. The authors explore the role that non-Muslim minorities played within this culture and they detail the splits within the Muslim world that continue to this day.

"Not only an engrossing read about the distant past, both informative and entertaining, but also a profoundly thought-provoking view of our not-really-so- 'new' present . . . All medieval history is here, beautifully narrated . . . The vision takes in whole imperial landscapes but also makes room for intimate portraits of key individuals, and even some poems."—Wall Street Journal "A lively history . . . [Jones] has managed to touch every major topic. As each piece of the puzzle is placed into position, the modern world gradually comes into view . . . Powers and Thrones

provides the reader with a framework for understanding a complicated subject, and it tells the story of an essential era of world history with skill and style."—The New York Times The New York Times bestselling author returns with an epic history of the medieval world—a rich and complicated reappraisal of an era whose legacy and lessons we are still living with today. When the once-mighty city of Rome was sacked by barbarians in 410 and lay in ruins, it signaled the end of an era--and the beginning of a thousand years of profound transformation. In a gripping narrative bursting with big names—from Sts Augustine and Attila the Hun to the Prophet Muhammad and Eleanor of Aquitaine—Dan Jones charges through the history of the Middle Ages. Powers and Thrones takes readers on a journey through an emerging Europe, the great capitals of late Antiquity, as well as the influential cities of the Islamic West, and culminates in the first European voyages to the Americas. The medieval world was forged by the big forces that still occupy us today: climate change, pandemic disease, mass migration, and technological revolutions. This was the time when the great European nationalities were formed; when the basic Western systems of law and governance were codified; when the Christian Churches matured as both powerful institutions and the regulators of Western public morality; and when art, architecture, philosophical inquiry and scientific invention went through periods of massive, revolutionary change. The West was rebuilt on the ruins of an empire and emerged from a state of crisis and collapse to dominate the world. Every sphere of human life and activity was transformed in the thousand years covered by Powers and Thrones. As we face a critical turning point in our own millennium, Dan Jones shows that how we got here matters more than ever.
