managing contracts and relationships with suppliers.

What is procurement and supply? | CIPS

Sean Kolenko. Understanding the difference between procurement and supply chain management is crucial, as these terms are not interchangeable but they often get mixed up.

Procurement is the process of acquiring the goods your company needs for its business model. Supply chain management is the process of turning those goods into products and distributing them to customers as efficiently as possible.

The procurement manager is responsible for finding new suppliers, running various sourcing activities and negotiating terms and conditions. They take part in new saving initiatives and drive these as a project manager. The procurement manager's tasks mainly involve strategic activities in bigger companies. In smaller companies, the role might be more diverse and include some parts of operational activities as well.

The objectives of a world-class procurement organization move far beyond the traditional belief that procurement's primary role is to obtain goods and services in response to internal needs. To understand how this role is changing, we must understand what purchasing is all about, starting with the primary objectives of a world-class purchasing organization.
