division of IBM since 2003. RUP is not a single concrete prescriptive process, but rather an adaptable process framework, intended to be tailored by the development organizations and software project teams that will select the elements of the process that are appropriate for their needs. RUP is a specific implementation of the Unified Process.

Rational Unified Process - Wikipedia

It's not surprising, then, that much of The Rational Unified Process: An Introduction is made up of somewhat uninformative statements, like "Workers have activities which define the work they perform", or "A metric is a measurable attribute of an entity". RUP is gaining mind share as a useful tool--and this is a low cost introduction--but

Rational Unified Process (RUP) is an agile software development method, in which the life cycle of a project, or the development of software, is divided into four phases. Various activities take place during these phases: modelling, analysis and design, implementation, testing and application. The Rational Unified Process (RUP) is iterative, meaning repeating; and agile. Iterative because all of the process's core activities repeat throughout the project.
