$r = \sqrt{a^2 + R^2 - 2aR \cos(\theta - \phi)}$ 1/2, where a and R are the polar angles in x and y space, respectively. Second, our solution must be valid for all θ in the circle; hence the distance of y from the origin must now become a variable, which we shall call r . Finally, note that $ds = R d\theta$ on C , so we can write the solution in polar coordinates as.
