Abstract. The current work contains the load cases & boundary conditions for the stress analysis of chassis using finite element analysis over ANSYS. Shell elements have been used for the longitudinal members & cross members of the chassis. The advantage of using shell element is that the stress details can be obtained over the subsections of the chassis as well as over the complete section of the chassis.

For this model, the maximum loaded weight of truck plus body is 10.000 kg. The load is assumed as a uniform distributed

Structural Analysis of Automotive Chassis Frame and Design ...

Design of the vehicle chassis has to be started from analysis of load cases. There are five basic load cases to consider:- bending case: loading in vertical plane, the x-z plane due to the weight of components distributed along the vehicle frame which cause bending about the y-axis;- torsion case: vehicle body is subjected to a moment applied at the axle centerlines by applying upward and downward loads at each axle.

The chassis frame acts as the skeleton of the automobile so it should be able to withstand against various load condition. FEA Analysis Confirms ability to assess the forces and safety of design prior to manufacturing. Material Preferred for FSAE chassis is AISI4130 alloy of chromium and Molybdenum which has high strength as well as low weight.

CHASSIS STIFFNESS TARGETS With the loading conditions discussed above it should now be possible to design the frame to be strong enough not to fail under the global loads acting on it for the different load cases. Just as importantly, however, is the stiffness of the entire chassis structure that affects the proper vehicle dynamics and handling.

Such load cases are called as peak loads / strength events. Due to their extreme nature, simulating the peak load events with good accuracy is of great importance in the design and development cycle of various components in the vehicle chassis system. Some of the common scenarios of peak load events can be, driving over a curb stone, skid against a curb, driving into a
